## 2.3 BasketConstituent

### 2.3.1 Description:

A type describing each of the constituents of a basket swap.

### 2.3.2 Contents:

**underlyingAsset** (exactly one occurrence; of the type UnderlyingAsset) Define the underlying asset when it is a listed security.

**constituentWeight** (zero or one occurrence; of the type ConstituentWeight) Specifies the weight of each of the underlyer constituent within the basket, either in absolute or relative terms. This is an optional component, as certain swaps do not specify a specific weight for each of their basket constituents.

**dividendPayout** (zero or one occurrence; of the type DividendPayout) Specifies the dividend payout ratio associated with an equity underlyer. A basket swap can have different payout ratios across the various underlying constituents. In certain cases the actual ratio is not known on trade inception, and only general conditions are then specified.

**underlyerPrice** (zero or one occurrence; of the type Price) Specifies the price that is associated with each of the basket constituents. This component is optional, as it is not absolutely required to accurately describe the economics of the trade, considering the price that characterizes the equity swap is associated to the leg of the trade.

**underlyerNotional** (zero or one occurrence; of the type Money) Specifies the notional (i.e. price \* quantity) that is associated with each of the basket constituents. This component is optional, as it is not absolutely required to accurately describe the economics of the trade, considering the notional that characterizes the equity swap is associated to the leg of the trade.

**underlyerSpread** (zero or one occurrence; of the type Reference) Provides a link to the spread schedule used for this underlyer.

**couponPayment** (zero or one occurrence; of the type PendingPayment) The next upcoming coupon payment.
