1.2 AdditionalPaymentAmount

1.2.1 Description:

Specifies the amount of the fee along with, when applicable, the formula that supports its determination.

1.2.2 Contents:

paymentAmount (zero or one occurrence; of the type Money) The currency amount of the payment.

formula (zero or one occurrence; of the type Formula) Specifies a formula, with its description and components.

1.2.3 Used by:

- Complex type: ReturnSwapAdditionalPayment

1.2.4 Derived Types:

1.2.5 Figure:

1.2.6 Schema Fragment:

```
<xsd:complexType name="AdditionalPaymentAmount">

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

1.3 AdjustableDateOrRelativeDateSequence

1.3.1 Description:

A type describing a date defined as subject to adjustment or defined in reference to another date through one or several date offsets.

1.3.2 Contents:

Either

adjustableDate (exactly one occurrence; of the type AdjustableDate) A date that shall be subject to adjustment if it would otherwise fall on a day that is not a business day in the specified business centers, together with the convention for adjusting the date.

Or

relativeDateSequence (exactly one occurrence; of the type RelativeDateSequence) A date specified in relation to some other date defined in the document (the anchor date), where there is the opportunity to specify a combination of offset rules. This component will typically be used for defining the valuation date in relation to the payment date, as both the currency and the exchange holiday calendars need to be considered.

1.3.3 Used by:

- Complex type: EquityValuation

1.3.4 Derived Types:

1.3.5 Figure:

1.3.6 Schema Fragment:

```
<xsd:complexType name="AdjustableDateOrRelativeDateSequence">
  <xsd:annotation>

</xsd:complexType>
```

1.4 BoundedCorrelation

1.4.1 Description:

A type describing correlation bounds, which form a cap and a floor on the realized correlation.

1.4.2 Contents:

minimumBoundaryPercent (zero or one occurrence; of the type xsd:decimal) Minimum Boundary as a percentage of the Strike Price.

maximumBoundaryPercent (zero or one occurrence; of the type xsd:decimal) Maximum Boundary as a percentage of the Strike Price.

1.4.3 Used by:

- Complex type: Correlation

1.4.4 Derived Types:

1.4.5 Figure:

1.4.6 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

1.5 BoundedVariance

1.5.1 Description:

A type describing variance bounds, which are used to exclude money price values outside of the specified range In a Up Conditional Swap Underlyer price must be equal to or higher than Lower Barrier In a Down Conditional Swap Underlyer price must be equal to or lower than Upper Barrier In a Corridor Conditional Swap Underlyer price must be equal to or higher than Lower Barrier and must be equal to or lower than Upper Barrier.

1.5.2 Contents:

realisedVarianceMethod (exactly one occurrence; of the type RealisedVarianceMethodEnum) The contract specifies whether which price must satisfy the boundary condition.

daysInRangeAdjustment (exactly one occurrence; of the type xsd:boolean) The contract specifies whether the notional should be scaled by the Number of Days in Range divided by the Expected N. The number of Days in Ranges refers to the number of returns that contribute to the realized volatility.

upperBarrier (zero or one occurrence; of the type xsd:decimal) All observations above this price level will be excluded from the variance calculation.

lowerBarrier (zero or one occurrence; of the type xsd:decimal) All observations below this price level will be excluded from the variance calculation.

1.5.3 Used by:

- Complex type: Variance

1.5.4 Derived Types:

1.5.5 Figure:

1.5.6 Schema Fragment:

1.6 Compounding

1.6.1 Description:

Specifies the compounding method and the compounding rate.

1.6.2 Contents:

compoundingMethod (exactly one occurrence; of the type CompoundingMethodEnum) If more than one calculation period contributes to a single payment amount this element specifies whether compounding is applicable, and if so, what compounding method is to be used. This element must only be included when more than one calculation period contributes to a single payment amount.

compoundingRate (exactly one occurrence; of the type CompoundingRate) Defines a compounding rate. The compounding interest can either point back to the interest calculation node on the Interest Leg, or be defined specifically.

1.6.3 Used by:

- Complex type: InterestCalculation

1.6.4 Derived Types:

1.6.5 Figure:

1.6.6 Schema Fragment:

1.7 CompoundingRate

1.7.1 Description:

A type defining a compounding rate. The compounding interest can either point back to the interest calculation node on the Interest Leg, or be defined specifically.

1.7.2 Contents:

Either

interestLegRate (exactly one occurrence; of the type InterestCalculationReference) Reference to the interest calculation node on the Interest Leg.

Or

specificRate (exactly one occurrence; of the type InterestAccrualsMethod) Defines a specific rate.

1.7.3 Used by:

- Complex type: Compounding

1.7.4 Derived Types:

1.7.5 Figure:

1.8 Correlation

1.8.1 Description:

A type describing the correlation amount of a correlation swap

1.8.2 Contents:

closingLevel (exactly one occurrence; of the type xsd:boolean) If present and true then take the closing level for each stock in the basket prior to calculating the correlation

notionalAmount (exactly one occurrence; of the type Money) This is a cash multiplier

correlationStrikePrice (exactly one occurrence; of the type xsd:decimal) Correlation Strike Price

expectedN (zero or one occurrence; of the type xsd:positiveInteger) Expected number of trading days

boundedCorrelation (zero or one occurrence; of the type BoundedCorrelation) Bounded Correlation

numberOfDataSeries (exactly one occurrence; of the type xsd:positiveInteger) Number of data series, normal market practice is that correlation data sets are drawn from geographic market areas, such as America, Europe and Asia Pacific, each of these geographic areas will have its own data series to avoid contagion

1.8.3 Used by:

- Complex type: LegAmount

1.8.4 Derived Types:

1.9 CorrelationLeg

1.9.1 Description:

A type describing return which is driven by a Correlation calculation.

1.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLegUnderlyer)

- A base class for all return leg types with an underlyer.

valuation (exactly one occurrence; of the type EquityValuation) Valuation of the underlyer

amount (exactly one occurrence; of the type VarianceAmount) Specifies, in relation to each Equity Payment Date, the amount to which the Equity Payment Date relates. Unless otherwise specified, this term has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

1.9.3 Used by:

- Element: correlationLeg

1.9.4 Derived Types:

1.9.5 Figure:

1.10 EquityCorporateEvents

1.10.1 Description:

A type for defining the merger events and their treatment.

1.10.2 Contents:

shareForShare (exactly one occurrence; of the type ShareExtraordinaryEventEnum) The consideration paid for the original shares following the Merger Event consists wholly of new shares.

shareForOther (exactly one occurrence; of the type ShareExtraordinaryEventEnum) The consideration paid for the original shares following the Merger Event consists wholly of cash/securities other than new shares.

shareForCombined (exactly one occurrence; of the type ShareExtraordinaryEventEnum) The consideration paid for the original shares following the Merger Event consists of both cash/securities and new shares.

1.10.3 Used by:

1.11 EquityPremium

1.11.1 Description:

A type used to describe the amount paid for an equity option.

1.11.2 Contents:

payerPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

receiverPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

premiumType (zero or one occurrence; of the type PremiumTypeEnum) Forward start Premium type

paymentAmount (zero or one occurrence; of the type Money) The currency amount of the payment.

paymentDate (zero or one occurrence; of the type AdjustableDate) The payment date. This date is subject to adjustment in accordance with any applicable business day convention.

swapPremium (zero or one occurrence; of the type xsd:boolean) Specifies whether or not the premium is to be paid in the style of payments under an interest rate swap contract.

pricePerOption (zero or one occurrence; of the type Money) The amount of premium to be paid expressed as a function of the number of options.

percentageOfNotional (zero or one occurrence; of the type xsd:decimal) The amount of premium to be paid expressed as a percentage of the notional value of the transaction. A percentage of 5% would be expressed as 0.05.

1.11.3 Used by:

- Complex type: EquityDerivativeShortFormBase
- Complex type: EquityOption

1.12 EquityStrike

1.12.1 Description:

A type for defining the strike price for an equity option. The strike price is either: (i) in respect of an index option transaction, the level of the relevant index specified or otherwise determined in the transaction; or (ii) in respect of a share option transaction, the price per share specified or otherwise determined in the transaction. This can be expressed either as a percentage of notional amount or as an absolute value.

1.12.2 Contents:

Either

strikePrice (exactly one occurrence; of the type xsd:decimal) The price or level at which the option has been struck.

Or

strikePercentage (exactly one occurrence; of the type xsd:decimal) The price or level expressed as a percentage of the forward starting spot price.

currency (zero or one occurrence; of the type Currency) The currency in which an amount is denominated.

1.12.3 Used by:

- Complex type: EquityDerivativeShortFormBase
- Complex type: EquityOption

1.12.4 Derived Types:

1.13 EquityValuation

1.13.1 Description:

A type for defining how and when an equity option is to be valued.

1.13.2 Contents:

Either

valuationDate (exactly one occurrence; of the type AdjustableDateOrRelativeDateSequence) The term "Valuation Date" is assumed to have the meaning as defined in the ISDA 2002 Equity Derivatives Definitions.

Or

valuationDates (exactly one occurrence; of the type AdjustableRelativeOrPeriodicDates) Specifies the interim equity valuation dates of the swap.

valuationTimeType (zero or one occurrence; of the type TimeTypeEnum) The time of day at which the calculation agent values the underlying, for example the official closing time of the exchange.

valuationTime (zero or one occurrence; of the type BusinessCenterTime) The specific time of day at which the calculation agent values the underlying.

futuresPriceValuation (zero or one occurrence; of the type xsd:boolean) The official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions.

optionsPriceValuation (zero or one occurrence; of the type xsd:boolean) The official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions.

1.16 InterestCalculation

1.16.1 Description:

Specifies the calculation method of the interest rate leg of the equity swap. Includes the floating or fixed rate calculation definitions, along with the determination of the day count fraction.

1.16.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type InterestAccrualsMethod)

- A type describing the method for accruing interests on dividends. Can be either a fixed rate reference or a floating rate reference.

dayCountFraction (exactly one occurrence; of the type DayCountFraction) The day count fraction.

compounding (zero or one occurrence; of the type Compounding) Defines compounding rates on the Interest Leg.

1.16.3 Used by:

- Complex type: InterestLeg

1.16.4 Derived Types:

1.16.5 Figure:

1.18 InterestLeg

1.18.1 Description:

A type describing the fixed income leg of the equity swap.

1.18.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLeg)

- The abstract base class for all types of Return Swap Leg.

interestLegCalculationPeriodDates (exactly one occurrence; of the type InterestLegCalculationPeriodDates) Component that holds the various dates used to specify the interest leg of the equity swap. It is used to define the InterestPeriodDates identifier.

notional (exactly one occurrence; of the type ReturnSwapNotional) Specifies the notional of a return type swap. When used in the equity leg, the definition will typically combine the actual amount (using the notional component defined by the FpML industry group) and the determination method. When used in the interest leg, the definition will typically point to the definition of the equity leg.

interestAmount (exactly one occurrence; of the type LegAmount) Specifies, in relation to each Interest Payment Date, the amount to which the Interest Payment Date relates. Unless otherwise specified, this term has the meaning defined in the ISDA 2000 ISDA Definitions.

interestCalculation (exactly one occurrence; of the type InterestCalculation) Specifies the calculation method of the interest rate leg of the equity swap. Includes the floating or fixed rate calculation definitions, along with the determination of the day count fraction.

stubCalculationPeriod (zero or one occurrence; of the type StubCalculationPeriod) Specifies the stub calculation period

1.19 InterestLegCalculationPeriodDates

1.19.1 Description:

Component that holds the various dates used to specify the interest leg of the equity swap. It is used to define the InterestPeriodDates identifier.

1.19.2 Contents:

effectiveDate (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the effective date of the equity swap. This global element is valid within the equity swaps namespace. Within the FpML namespace, another effectiveDate global element has been defined, that is different in the sense that it does not propose the choice of referring to another date in the document.

terminationDate (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the termination date of the equity swap. This global element is valid within the equity swaps namespace. Within the FpML namespace, another terminationDate global element has been defined, that is different in the sense that it does not propose the choice of referring to another date in the document.

interestLegResetDates (exactly one occurrence; of the type InterestLegResetDates) Specifies the reset dates of the interest leg of the swap.

interestLegPaymentDates (exactly one occurrence; of the type AdjustableOrRelativeDates) Specifies the payment dates of the interest leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDates component), this element will typically point to the payment dates of the equity leg of the swap.

1.19.3 Used by:

1.20 InterestLegCalculationPeriodDatesReference

1.20.1 Description:

Reference to the calculation period dates of the interest leg.

1.20.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

1.20.3 Used by:

- Complex type: InterestLegResetDates

1.20.4 Derived Types:

1.20.5 Figure:

1.20.6 Schema Fragment:

```
<xsd:complexType name="InterestLegCalculationPeriodDatesReference">

</xsd:complexType>
```

1.21 InterestLegResetDates

1.21.1 Description:

1.21.2 Contents:

calculationPeriodDatesReference (exactly one occurrence; of the type InterestLegCalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

Either

resetRelativeTo (exactly one occurrence; of the type ResetRelativeToEnum) Specifies whether the reset dates are determined with respect to each adjusted calculation period start date or adjusted calculation period end date. If the reset frequency is specified as daily this element must not be included.

Or

resetFrequency (exactly one occurrence; of the type ResetFrequency) The frequency at which reset dates occur. In the case of a weekly reset frequency, also specifies the day of the week that the reset occurs. If the reset frequency is greater than the calculation period frequency then this implies that more than one reset date is established for each calculation period and some form of rate averaging is applicable.

1.21.3 Used by:

- Complex type: InterestLegCalculationPeriodDates

1.22 LegAmount

1.22.1 Description:

A type describing the amount that will paid or received on each of the payment dates. This type is used to define both the Equity Amount and the Interest Amount.

1.22.2 Contents:

Either

currency (exactly one occurrence; of the type Currency) The currency in which an amount is denominated.

Or

determinationMethod (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

currencyReference (exactly one occurrence; of the type IdentifiedCurrencyReference) The currency in which an amount is denominated.

paymentCurrency (zero or one occurrence; of the type PaymentCurrency) Currency in which the payment relating to the leg amount (equity amount or interest amount) or the dividend will be denominated.

Either

referenceAmount (exactly one occurrence; of the type ReferenceAmount) Specifies the reference Amount when this term either corresponds to the standard ISDA Definition (either the 2002 Equity Definition for the Equity Amount, or the 2000 Definition for the Interest Amount), or points to a term defined elsewhere in the swap document.

Or

formula (exactly one occurrence; of the type Formula) Specifies a formula, with its description and components.

Or

encodedDescription (exactly one occurrence; of the type xsd:base64Binary) Description of the leg amount when represented through an encoded image.

Or

variance (exactly one occurrence; of the type Variance) Specifies Variance for Variance Leg

Or

correlation (exactly one occurrence; of the type Correlation) Specifies Correlation for Correlation Leg

calculationDates (zero or one occurrence; of the type AdjustableRelativeOrPeriodicDates) Specifies the date ion which a calculation or an observation will be performed for the purpose of defining the Equity Amount, and in accordance to the definition terms of this latter.

1.24 OptionFeatures

1.24.1 Description:

A type for defining option features.

1.24.2 Contents:

asian (zero or one occurrence; of the type Asian) An option where and average price is taken on valuation.

barrier (zero or one occurrence; of the type Barrier) An option with a barrier feature.

knock (zero or one occurrence; of the type Knock) A knock feature.

passThrough (zero or one occurrence; of the type PassThrough) Pass through payments from the underlyer, such as dividends.

1.25 PrincipalExchangeAmount

1.25.1 Description:

Specifies the principal exchange amount, either by explicitly defining it, or by point to an amount defined somewhere else in the swap document.

1.25.2 Contents:

Either

amountRelativeTo (exactly one occurrence; of the type AmountReference)

Or

determinationMethod (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

principalAmount (exactly one occurrence; of the type Money) Principal exchange amount when explicitly stated.

1.25.3 Used by:

- Complex type: PrincipalExchangeDescriptions

1.25.4 Derived Types:

1.25.5 Figure:

1.26 PrincipalExchangeDescriptions

1.26.1 Description:

Specifies each of the characteristics of the principal exchange cashflows, in terms of paying/receiving counterparties, amounts and dates.

1.26.2 Contents:

payerPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

receiverPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

principalExchangeAmount (exactly one occurrence; of the type PrincipalExchangeAmount) Specifies the principal exchange amount, either by explicitly defining it, or by point to an amount defined somewhere else in the swap document.

principalExchangeDate (zero or one occurrence; of the type AdjustableOrRelativeDate) Date on which each of the principal exchanges will take place. This date is either explicitly stated, or is defined by reference to another date in the swap document. In this latter case, it will typically refer to one other date of the equity leg: either the effective date (initial exchange), or the last payment date (final exchange).

1.26.3 Used by:

1.29 Return

1.29.1 Description:

A type describing the dividend return conditions applicable to the swap.

1.29.2 Contents:

returnType (exactly one occurrence; of the type ReturnTypeEnum) Defines the type of return associated with the equity swap.

dividendConditions (zero or one occurrence; of the type DividendConditions) Specifies the conditions governing the payment of the dividends to the receiver of the equity return. With the exception of the dividend payout ratio, which is defined for each of the underlying components.

1.29.3 Used by:

1.30 ReturnLeg

1.30.1 Description:

A type describing the return leg of a return type swap.

1.30.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLegUnderlyer)

- A base class for all return leg types with an underlyer.

rateOfReturn (exactly one occurrence; of the type ReturnLegValuation) Element named "valuation" in versions prior to FpML 4.2 Second Working Draft. Specifies the terms of the initial price of the return type swap and of the subsequent valuations of the underlyer.

notional (exactly one occurrence; of the type ReturnSwapNotional) Specifies the notional of a return type swap. When used in the equity leg, the definition will typically combine the actual amount (using the notional component defined by the FpML industry group) and the determination method. When used in the interest leg, the definition will typically point to the definition of the equity leg.

amount (exactly one occurrence; of the type ReturnSwapAmount) Element named "equityAmount" in versions prior to FpML 4.2 Second Working Draft. Specifies, in relation to each Payment Date, the amount to which the Payment Date relates. For equity swaps this element is equivalent to the Equity Amount term as defined in the ISDA 2002 Equity Derivatives Definitions.

return (exactly one occurrence; of the type Return) Specifies the conditions under which dividend affecting the underlyer will be paid to the receiver of the amounts.

notionalAdjustments (exactly one occurrence; of the type NotionalAdjustmentEnum) Specifies the conditions that govern the adjustment to the number of units of the equity swap.

fxFeature (zero or one occurrence; of the type FxFeature) A quanto or composite FX feature.

1.31 ReturnLegValuation

1.31.1 Description:

A type describing the initial and final valuation of the underlying.

1.31.2 Contents:

initialPrice (exactly one occurrence; of the type ReturnLegValuationPrice) Specifies the initial reference price of the underlying. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

notionalReset (exactly one occurrence; of the type xsd:boolean) Element named "equityNotionalReset" in versions prior to FpML 4.2 Second Working Draft. For equity swaps, this element is equivalent to the term "Equity Notional Reset" as defined in the ISDA 2002 Equity Derivatives Definitions. The reference to the ISDA definition is either "Applicable" or "Inapplicable".

valuationPriceInterim (zero or one occurrence; of the type ReturnLegValuationPrice) Specifies the interim valuation price of the underlying. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

valuationPriceFinal (exactly one occurrence; of the type ReturnLegValuationPrice) Specifies the final valuation price of the underlying. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

paymentDates (exactly one occurrence; of the type ReturnSwapPaymentDates) Element named "equityPaymentDates" in versions prior to FpML 4.2 Second Working Draft. Specifies the payment dates of the swap.

exchangeTradedContractNearest (zero or one occurrence; of the type ExchangeTradedContract) References a Contract on the Exchange.

1.33 ReturnSwap

1.33.1 Description:

A type describing return swaps including equity swaps (long form), total return swaps, and variance swaps.

1.33.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapBase)

- A type describing the components that are common for return type swaps, including short and long form equity swaps representations.

additionalPayment (zero or more occurrences; of the type ReturnSwapAdditionalPayment) Specifies additional payment(s) between the principal parties to the trade. This component extends some of the features of the additionalPayment component developed by the FpML industry group. Appropriate discussions will determine whether it would be appropriate to extend the shared component in order to meet the further requirements of equity swaps.

earlyTermination (zero or more occurrences; of the type ReturnSwapEarlyTermination) Specifies, for one or for both the parties to the trade, the date from which it can early terminate it.

extraordinaryEvents (zero or one occurrence; of the type ExtraordinaryEvents) Where the underlying is shares, specifies events affecting the issuer of those shares that may require the terms of the transaction to be adjusted.

1.33.3 Used by:

- Element: equitySwap
- Element: returnSwap

1.33.4 Derived Types:

1.34 ReturnSwapAdditionalPayment

1.34.1 Description:

A type describing the additional payment(s) between the principal parties to the trade. This component extends some of the features of the additionalPayment component previously developed in FpML. Appropriate discussions will determine whether it would be appropriate to extend the shared component in order to meet the further requirements of equity swaps.

1.34.2 Contents:

payerPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

receiverPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

additionalPaymentAmount (exactly one occurrence; of the type AdditionalPaymentAmount) Specifies the amount of the fee along with, when applicable, the formula that supports its determination.

additionalPaymentDate (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the value date of the fee payment/receipt.

paymentType (zero or one occurrence; of the type PaymentType)

1.34.3 Used by:

- Complex type: ReturnSwap

1.34.4 Derived Types:

1.34.5 Figure:

1.35 ReturnSwapAmount

1.35.1 Description:

Specifies, in relation to each Payment Date, the amount to which the Payment Date relates. For Equity Swaps this element is equivalent to the Equity Amount term as defined in the ISDA 2002 Equity Derivatives Definitions.

1.35.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type LegAmount)

- A type describing the amount that will paid or received on each of the payment dates. This type is used to define both the Equity Amount and the Interest Amount.

cashSettlement (exactly one occurrence; of the type xsd:boolean)

optionsExchangeDividends (zero or one occurrence; of the type xsd:boolean)

additionalDividends (zero or one occurrence; of the type xsd:boolean)

1.36 ReturnSwapBase

1.36.1 Description:

A type describing the components that are common for return type swaps, including short and long form equity swaps representations.

1.36.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

buyerPartyReference (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this is the fixed rate payer.

sellerPartyReference (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

returnSwapLeg (one or more occurrences; of the type ReturnSwapLeg) An placeholder for the actual Return Swap Leg definition.

principalExchangeFeatures (zero or one occurrence; of the type PrincipalExchangeFeatures) This is used to document a Fully Funded Return Swap.

1.36.3 Used by:

- Complex type: EquitySwapTransactionSupplement
- Complex type: ReturnSwap

1.36.4 Derived Types:

- Complex type: EquitySwapTransactionSupplement

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

1.38 ReturnSwapLeg

1.38.1 Description:

The abstract base class for all types of Return Swap Leg.

1.38.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Leg)

- A supertype of leg. All swap legs extend this type.

payerPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

receiverPartyReference (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

paymentFrequency (zero or one occurrence; of the type Interval) Frequency at which this leg pays.

1.38.3 Used by:

- Element: returnSwapLeg
- Complex type: DeprecatedEquityLeg
- Complex type: InterestLeg
- Complex type: ReturnSwapLegUnderlyer

1.38.4 Derived Types:

1.39 ReturnSwapLegUnderlyer

1.39.1 Description:

A base class for all return leg types with an underlyer.

1.39.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLeg)

- The abstract base class for all types of Return Swap Leg.

effectiveDate (zero or one occurrence; of the type AdjustableOrRelativeDate) Specifies the effective date of this leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the effective date of the other leg of the swap

terminationDate (zero or one occurrence; of the type AdjustableOrRelativeDate) Specifies the termination date of this leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the termination date of the other leg of the swap.

underlyer (exactly one occurrence; of the type Underlyer) Specifies the underlying component of the leg, which can be either one or many and consists in either equity, index or convertible bond component, or a combination of these.

1.39.3 Used by:

- Complex type: CorrelationLeg
- Complex type: ReturnLeg
- Complex type: VarianceLeg

1.39.4 Derived Types:

- Complex type: CorrelationLeg
- Complex type: ReturnLeg
- Complex type: VarianceLeg

1.39.5 Figure:

1.39.6 Schema Fragment:

```
<xsd:complexType name="ReturnSwapLegUnderlyer" abstract="true">

1.40 ReturnSwapNotional

1.40.1 Description:

Specifies the notional of return type swap. When used in the equity leg, the definition will typically combine the actual amount (using the notional component defined by the FpML industry group) and the determination method. When used in the interest leg, the definition will typically point to the definition of the equity leg.

1.40.2 Contents:

Either

determinationMethod (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

notionalAmount (exactly one occurrence; of the type Money) The notional amount.

Or

amountRelativeTo (exactly one occurrence; of the type AmountReference)

1.40.3 Used by:

- Complex type: DeprecatedEquityLeg
- Complex type: InterestLeg
- Complex type: ReturnLeg

1.40.4 Derived Types:

1.40.5 Figure:

1.41 ReturnSwapPaymentDates

1.41.1 Description:

A type describing the return payment dates of the swap.

1.41.2 Contents:

paymentDatesInterim (zero or one occurrence; of the type AdjustableOrRelativeDates) Element named "equityPaymentDatesInterim" in versions prior to FpML 4.2 Second Working Draft. Specifies the interim payment dates of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDates component), this element will typically refer to the valuation dates and add a lag corresponding to the settlement cycle of the underlying.

paymentDateFinal (exactly one occurrence; of the type AdjustableOrRelativeDate) Element named "equityPaymentDateFinal" in versions prior to FpML 4.2 Second Working Draft. Specifies the final payment date of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically refer to the final valuation date and add a lag corresponding to the settlement cycle of the underlying.

1.41.3 Used by:

- Complex type: ReturnLegValuation

1.41.4 Derived Types:

1.41.5 Figure:

</xsd:complexType>
```

1.42 StartingDate

1.42.1 Description:

A type specifying the date from which the early termination clause can be exercised.

1.42.2 Contents:

Either

dateRelativeTo (exactly one occurrence; of the type DateReference) Specifies the anchor as an href attribute. The href attribute value is a pointer style reference to the element or component elsewhere in the document where the anchor date is defined.

Or

adjustableDate (exactly one occurrence; of the type AdjustableDate)

1.42.3 Used by:

- Complex type: ReturnSwapEarlyTermination
- Complex type: VarianceAmount

1.42.4 Derived Types:

1.42.5 Figure:

1.42.6 Schema Fragment:

  </xsd:choice>
</xsd:complexType>
```

1.44 Variance

1.44.1 Description:

A type describing the variance amount of a variance swap

1.44.2 Contents:

Either

initialLevel (exactly one occurrence; of the type xsd:decimal)

Or

closingLevel (exactly one occurrence; of the type xsd:boolean)

Or

expiringLevel (exactly one occurrence; of the type xsd:boolean) If present and true this contract will strike off the default exchange traded contract

varianceAmount (exactly one occurrence; of the type Money)

Either

volatilityStrikePrice (exactly one occurrence; of the type xsd:decimal)

Or

varianceStrikePrice (exactly one occurrence; of the type xsd:decimal)

expectedN (zero or one occurrence; of the type xsd:positiveInteger)

varianceCap (zero or one occurrence; of the type xsd:boolean)

unadjustedVarianceCap (zero or one occurrence; of the type xsd:decimal) For use when varianceCap is applicable. Contains the scaling factor of the Variance Cap that can differ on a trade-by-trade basis in the European market. For example, a Variance Cap of $2.5^2 \times$ Variance Strike Price has an unadjustedVarianceCap of 2.5.

exchangeTradedContractNearest (zero or one occurrence; of the type ExchangeTradedContract)

vegaNotionalAmount (zero or one occurrence; of the type xsd:decimal) Vega Notional represents the approximate gain/loss at maturity for a 1% difference between RVol (realised vol) and KVol (strike vol). It does not necessarily represent the Vega Risk of the trade.

boundedVariance (zero or one occurrence; of the type BoundedVariance) Conditions which bound variance. The contract specifies one or more boundary levels. These levels are expressed as prices for confirmation purposes Underlyer price must be equal to or higher than Lower Barrier is known as Up Conditional Swap Underlyer price must be equal to or lower than Upper Barrier is known as Down Conditional Swap Underlyer price must be equal to or higher than Lower Barrier and must be equal to or lower than Upper Barrier is known as Barrier Conditional Swap.

fxFeature (zero or one occurrence; of the type FxFeature) Quanto, Composite, or Cross Currency FX features

1.45 VarianceAmount

1.45.1 Description:

Specifies, in relation to each Equity Payment Date, the amount to which the Equity Payment Date relates for Variance Swaps. Unless otherwise specified, this term has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

1.45.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapAmount)

- Specifies, in relation to each Payment Date, the amount to which the Payment Date relates. For Equity Swaps this element is equivalent to the Equity Amount term as defined in the ISDA 2002 Equity Derivatives Definitions.

cashSettlementPaymentDate (zero or one occurrence; of the type AdjustableOrRelativeDate) Typically specified as a number of days following the valuation date, such as one settlement cycle following the valuation date. Number of days can vary in the European market.

observationStartDate (zero or one occurrence; of the type StartingDate) The start of the period over which observations are made to determine the variance. Used when the date differs from the trade date such as for forward starting variance swaps.

allDividends (zero or one occurrence; of the type xsd:boolean) Represents the European Master Confirmation value of 'All Dividends' which, when applicable, signifies that, for a given Ex-Date, the daily observed Share Price for that day is adjusted (reduced) by the cash dividend and/or the cash value of any non cash dividend per Share (including Extraordinary Dividends) declared by the Issuer.

1.45.3 Used by:
