## ***1 Global Complex Types***

## 1.1 AffectedTransactions

### 1.1.1 Description:

### 1.1.2 Contents:

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

### 1.1.3 Used by:

- Complex type: CreditEventNoticeDocument

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="AffectedTransactions">  
  <xsd:group ref="TradeOrTradeReference.model" maxOccurs="unbounded" />  
</xsd:complexType>
```

## 1.2 AllocationAmended

### 1.2.1 Description:

A notification to inform downstream systems when a system that acts as source of trade information detects that an allocation has been modified.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**amendment** (one or more occurrences; of the type TradeAmendment)

**party** (one or more occurrences; of the type Party)

### 1.2.3 Used by:

### 1.2.4 Derived Types:

        <xsd:element name="amendment" type="TradeAmendment" maxOccurs="unbounded"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 AllocationCancelled

### 1.3.1 Description:

A notification to inform downstream systems when a system that acts as source of trade information detects that an allocation has been cancelled.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

Either

**trade** (exactly one occurrence; of the type Trade)

Or

**partyTradeIdentifier** (exactly one occurrence; of the type PartyTradeIdentifier)

**party** (one or more occurrences; of the type Party)

### 1.3.3 Used by:

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="AllocationCancelled">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A notification to inform downstream systems when a system that
      acts as source of trade information detects that an allocation
      has been cancelled.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:choice maxOccurs="unbounded">
          <xsd:element name="trade" type="Trade"/>
          <xsd:element name="partyTradeIdentifier" type="PartyTradeIdentifier"/>
        </xsd:choice>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 AllocationCreated

### 1.4.1 Description:

A notification to inform downstream systems when a system that acts as source of trade information detects that a new allocation has been created.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**trade** (one or more occurrences; of the type Trade)

**party** (one or more occurrences; of the type Party)

### 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="AllocationCreated">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A notification to inform downstream systems when a system that
      acts as source of trade information detects that a new allocation
      has been created.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="trade" type="Trade" maxOccurs="unbounded" />
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded" />
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.5 AmendmentConfirmed

### 1.5.1 Description:

A message generated when an Amendment is determined to be confirmed.

### 1.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**amendment** (exactly one occurrence; of the type Amendment)

**party** (one or more occurrences; of the type Party) One party element for each of the principal parties and any other party that is referenced.

### 1.5.3 Used by:

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="AmendmentConfirmed">
  <xsd:annotation>

</xsd:complexType>
```

## 1.7 ContractCancelled

### 1.7.1 Description:

Notification that a Contract has been subject to Cancellation

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ContractReferenceMessage)

- Abstract base class for Contract notification messages that require Contract Reference only

### 1.7.3 Used by:

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="ContractCancelled">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Notification that a Contract has been subject to Cancellation
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="ContractReferenceMessage" />
  </xsd:complexContent>
</xsd:complexType>
```

## 1.8 ContractCreated

### 1.8.1 Description:

Notification that a Contract has been Created

### 1.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**tradeReference** (zero or one occurrence; of the type PartyTradeIdentifiers)

**contract** (exactly one occurrence; of the type Contract)

**party** (one or more occurrences; of the type Party)

### 1.8.3 Used by:

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

```
<xsd:complexType name="ContractCreated">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Notification that a Contract has been Created
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="tradeReference" type="PartyTradeIdentifiers" minOccurs="0"/>
        <xsd:element name="contract" type="Contract"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.9 ContractFullTermination

### 1.9.1 Description:

Notification that a Contract has been subject to Full Termination

### 1.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**termination** (exactly one occurrence; of the type ContractTermination)

**party** (one or more occurrences; of the type Party)

### 1.9.3 Used by:

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

```
<xsd:complexType name="ContractFullTermination">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Notification that a Contract has been subject to Full Termination
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="termination" type="ContractTermination"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.10 ContractIncreased

### 1.10.1 Description:

Notification that a Contract has been Increased

### 1.10.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**increase** (exactly one occurrence; of the type ChangeContractSize)

**party** (one or more occurrences; of the type Party)

### 1.10.3 Used by:

### 1.10.4 Derived Types:

### 1.10.5 Figure:

### 1.10.6 Schema Fragment:

```
<xsd:complexType name="ContractIncreased">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Notification that a Contract has been Increased
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="increase" type="ChangeContractSize"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.11 ContractNovated

### 1.11.1 Description:

Notification that a Contract has been Novated

### 1.11.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**novation** (exactly one occurrence; of the type ContractNovation)

**party** (one or more occurrences; of the type Party)

### 1.11.3 Used by:

### 1.11.4 Derived Types:

### 1.11.5 Figure:

### 1.11.6 Schema Fragment:

```
<xsd:complexType name="ContractNovated">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Notification that a Contract has been Novated
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="novation" type="ContractNovation"/>
        <xsd:element name="party" type="Party" minOccurs="3" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.12 ContractPartialTermination

### 1.12.1 Description:

Notification that a Contract has been subject to Partial Termination

### 1.12.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**termination** (exactly one occurrence; of the type ChangeContractSize)

**party** (one or more occurrences; of the type Party)

### 1.12.3 Used by:

### 1.12.4 Derived Types:

### 1.12.5 Figure:

### 1.12.6 Schema Fragment:

```
<xsd:complexType name="ContractPartialTermination">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Notification that a Contract has been subject to Partial
      Termination
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="termination" type="ChangeContractSize"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## **1.13 CreditEvent**

### **1.13.1 Description:**

### **1.13.2 Contents:**

### **1.13.3 Used by:**

- Element: creditEvent
- Complex type: BankruptcyEvent
- Complex type: FailureToPayEvent
- Complex type: ObligationAccelerationEvent
- Complex type: ObligationDefaultEvent
- Complex type: RepudiationMoratoriumEvent
- Complex type: RestructuringEvent

### **1.13.4 Derived Types:**

- Complex type: BankruptcyEvent
- Complex type: FailureToPayEvent
- Complex type: ObligationAccelerationEvent
- Complex type: ObligationDefaultEvent
- Complex type: RepudiationMoratoriumEvent
- Complex type: RestructuringEvent

### **1.13.5 Figure:**

### **1.13.6 Schema Fragment:**

```
<xsd:complexType name="CreditEvent"/>
```

## 1.14 CreditEventNoticeDocument

### 1.14.1 Description:

An event type that records the occurrence of a credit event notice.

### 1.14.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

**affectedTransactions** (zero or one occurrence; of the type AffectedTransactions) Trades affected by this event.

**referenceEntity** (exactly one occurrence; of the type LegalEntity)

**creditEvent** (exactly one occurrence; of the type CreditEvent)

**publiclyAvailableInformation** (zero or more occurrences; of the type Resource) A public information source, e.g. a particular newspaper or electronic news service, that may publish relevant information used in the determination of whether or not a credit event has occurred.

**notifyingPartyReference** (exactly one occurrence; of the type PartyReference)

**notifiedPartyReference** (exactly one occurrence; of the type PartyReference)

**creditEventNoticeDate** (exactly one occurrence; of the type xsd:date)

**creditEventDate** (exactly one occurrence; of the type xsd:date)

### 1.14.3 Used by:

- Element: creditEventNotice
- Complex type: CreditEventNotification

### 1.14.4 Derived Types:

### 1.14.5 Figure:

### 1.14.6 Schema Fragment:

```
<xsd:complexType name="CreditEventNoticeDocument">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event type that records the occurrence of a credit event
      notice.
    </xsd:documentation>

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.16 FailureToPayEvent

### 1.16.1 Description:

### 1.16.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type CreditEvent)

•

### 1.16.3 Used by:

- Element: failureToPay

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

```
<xsd:complexType name="FailureToPayEvent">
  <xsd:complexContent>
    <xsd:extension base="CreditEvent"/>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.17 IncreaseConfirmed

### 1.17.1 Description:

A message generated when an Increase is determined to be confirmed.

### 1.17.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**increase** (exactly one occurrence; of the type Increase)

**party** (one or more occurrences; of the type Party) One party element for each of the principal parties and any other party that is referenced.

### 1.17.3 Used by:

### 1.17.4 Derived Types:

### 1.17.5 Figure:

### 1.17.6 Schema Fragment:

```
<xsd:complexType name="IncreaseConfirmed">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A message generated when an Increase is determined to be
      confirmed.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="increase" type="Increase"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One party element for each of the principal parties and
              any other party that is referenced.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.18 Language

### 1.18.1 Description:

The data type used for indicating the language of the resource, described using the ISO 639-2/T Code

### 1.18.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

- 

### 1.18.3 Used by:

- Complex type: Resource

### 1.18.4 Derived Types:

### 1.18.5 Figure:

### 1.18.6 Schema Fragment:

```
<xsd:complexType name="Language">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.20 NovateTrade

### 1.20.1 Description:

### 1.20.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NovationRequestMessage)

- Abstract base class for all Novation Request Messages.

### 1.20.3 Used by:

### 1.20.4 Derived Types:

### 1.20.5 Figure:

### 1.20.6 Schema Fragment:

```
<xsd:complexType name="NovateTrade">
  <xsd:complexContent>
    <xsd:extension base="NovationRequestMessage" />
  </xsd:complexContent>
</xsd:complexType>
```

## 1.21 Novation

### 1.21.1 Description:

An event type that records the occurrence of a novation

### 1.21.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationTradeDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a trade. If this element is not specified, the novationTradeDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Transaction being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Transaction being novated.

**remainingTrade** (zero or one occurrence; of the type Trade) This element contains a description of the remaining portion of a partially novated trade.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that

is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

Either

**contractualSupplement** (zero or more occurrences; of the type ContractualSupplement) DEPRECATED - This element will be removed in the next major version of FpML. The element contractualTermsSupplement should be used instead. Definition: A contractual supplement (such as those published by ISDA) that will apply to the trade.

Or

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

**payment** (zero or one occurrence; of the type Payment)

    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.26 NovationConsentRequest

### 1.26.1 Description:

A request message that passes details of the previously negotiated transaction that the transferor wishes to novate as well as describing the identity and roles of each party. As the same message is sent to both the transferee and remaining party it must contain the complete description of the underlying transaction (rather than just a reference) as the transferee will not have record of it.

### 1.26.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NovationRequestMessage)

- Abstract base class for all Novation Request Messages.

### 1.26.3 Used by:

### 1.26.4 Derived Types:

## 1.28 NovationNotificationMessage

### 1.28.1 Description:

Abstract base class for all Novation Notification Messages.

### 1.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**novation** (exactly one occurrence; of the type Novation)

**party** (one or more occurrences; of the type Party)

### 1.28.3 Used by:

- Complex type: NovationAlleged
- Complex type: NovationConfirmed
- Complex type: NovationMatched
- Complex type: TradeNovated

### 1.28.4 Derived Types:

- Complex type: NovationAlleged
- Complex type: NovationConfirmed
- Complex type: NovationMatched
- Complex type: TradeNovated

### 1.28.5 Figure:

## 1.35 RequestAllocation

### 1.35.1 Description:

Message used in order to initiate the allocation process.

### 1.35.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**blockTradeIdentifier** (exactly one occurrence; of the type BlockTradeIdentifier)

**allocations** (exactly one occurrence; of the type Allocations)

**party** (one or more occurrences; of the type Party)

### 1.35.3 Used by:

### 1.35.4 Derived Types:

### 1.35.5 Figure:

### 1.35.6 Schema Fragment:

        <xsd:element name="blockTradeIdentifier" type="BlockTradeIdentifier"/>
        <xsd:element name="allocations" type="Allocations"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.36 RequestAmendmentConfirmation

### 1.36.1 Description:

A message for requesting that the contained amendment be put forward for matching and confirmation.

### 1.36.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**amendment** (exactly one occurrence; of the type Amendment)

**party** (one or more occurrences; of the type Party) One party element for each of the principal parties and any other party that is referenced.

### 1.36.3 Used by:

### 1.36.4 Derived Types:

### 1.36.5 Figure:

### 1.36.6 Schema Fragment:

```
<xsd:complexType name="RequestAmendmentConfirmation">

            <xsd:documentation xml:lang="en">
              One party element for each of the principal parties and
              any other party that is referenced.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.40 Resource

### 1.40.1 Description:

Describes the resource that contains the media representation of a business event. For example, can describe a file or a URL that represents the event.

### 1.40.2 Contents:

**resourceId** (exactly one occurrence; of the type ResourceId) The unique identifier of the resource within the event.

**language** (zero or one occurrence; of the type Language) Indicates the language of the resource, described using the ISO 639-2/T Code.

**sizeInBytes** (zero or one occurrence; of the type xsd:decimal) Indicates the size of the resource in bytes. It could be used by the end user to estimate the download time and storage needs.

**length** (zero or one occurrence; of the type ResourceLength) Indicates the length of the resource. For example, if the resource were a PDF file, the length would be in pages.

**mimeType** (exactly one occurrence; of the type MimeType) Indicates the type of media used to store the content. mimeType is used to determine the software product(s) that can read the content. MIME Types are described in RFC 2046.

**name** (zero or one occurrence; of the type xsd:normalizedString) The name of the resource.

**comments** (zero or one occurrence; of the type xsd:string) Any additional comments that are deemed necessary. For example, which software version is required to open the document? Or, how does this resource relate to the others for this event?

**url** (zero or one occurrence; of the type xsd:anyURI) Indicates the URL at which the resource can be found.

### 1.40.3 Used by:

## 1.41 ResourceId

### 1.41.1 Description:

The data type used for resource identifiers.

### 1.41.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.41.3 Used by:

- Complex type: Resource

### 1.41.4 Derived Types:

### 1.41.5 Figure:

### 1.41.6 Schema Fragment:

```
<xsd:complexType name="ResourceId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for resource identifiers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="resourceIdScheme" type="xsd:anyURI" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.42 ResourceLength

### 1.42.1 Description:

The type that indicates the length of the resource.

### 1.42.2 Contents:

**lengthUnit** (exactly one occurrence; of the type LengthUnitEnum) The length unit of the resource. For example, pages (pdf, text documents) or time (audio, video files).

**lengthValue** (exactly one occurrence; of the type xsd:decimal) The length value of the resource.

### 1.42.3 Used by:

- Complex type: Resource

### 1.42.4 Derived Types:

### 1.42.5 Figure:

### 1.42.6 Schema Fragment:

```
<xsd:complexType name="ResourceLength">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The type that indicates the length of the resource.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="lengthUnit" type="LengthUnitEnum">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The length unit of the resource. For example, pages (pdf,
            text documents) or time (audio, video files).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="lengthValue" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The length value of the resource.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.43 RestructuringEvent

### 1.43.1 Description:

### 1.43.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type CreditEvent)

- **partialExerciseAmount** (zero or one occurrence; of the type Money)

### 1.43.3 Used by:

- Element: restructuring

### 1.43.4 Derived Types:

### 1.43.5 Figure:

### 1.43.6 Schema Fragment:

```
<xsd:complexType name="RestructuringEvent">
  <xsd:complexContent>
    <xsd:extension base="CreditEvent">
      <xsd:sequence>
        <xsd:element name="partialExerciseAmount" type="Money" minOccurs="0"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.44 Termination

### 1.44.1 Description:

An event type that defines the content of a Termination transaction.

### 1.44.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

**terminationTradeDate** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the Termination transaction.

**terminationEffectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the Termination becomes effective.

Either

**full** (exactly one occurrence; of the type Empty) The use of the Full element indicates that this is a Full Termination.

Or

**partial** (exactly one occurrence; of the type PartialTerminationAmount) The use of the Partial element indicates that this is a Partial Termination.

**payment** (zero or one occurrence; of the type Payment) A payment for the right to terminate the trade.

### 1.44.3 Used by:

- Complex type: RequestTerminationConfirmation
- Complex type: TerminationConfirmed
- Complex type: TradeTerminationRequest
- Complex type: TradeTerminationResponse

### 1.44.4 Derived Types:

### 1.44.5 Figure:

### 1.44.6 Schema Fragment:

```
<xsd:complexType name="Termination">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event type that defines the content of a Termination
      transaction.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Event">
      <xsd:sequence>
        <xsd:group ref="TradeOrTradeReference.model"/>
        <xsd:group ref="TerminationDetails.model"/>
        <xsd:element name="payment" type="Payment" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A payment for the right to terminate the trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

```
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.45 TerminationConfirmed

### 1.45.1 Description:

A message generated when a Termination is determined to be confirmed.

### 1.45.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**termination** (exactly one occurrence; of the type Termination)

**party** (one or more occurrences; of the type Party) One party element for each of the principal parties and any other party that is referenced.

### 1.45.3 Used by:

### 1.45.4 Derived Types:

### 1.45.5 Figure:

### 1.45.6 Schema Fragment:

```
<xsd:complexType name="TerminationConfirmed">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A message generated when a Termination is determined to be
      confirmed.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="termination" type="Termination"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One party element for each of the principal parties and
              any other party that is referenced.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.46 TradeAmended

### 1.46.1 Description:

This message is DEPRECATED and should not be used in new implementations. See ContractCreated. A notification to inform downstream systems when a system that acts as source of trade information detects that a trade has been modified.

### 1.46.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**trade** (exactly one occurrence; of the type Trade)

**party** (one or more occurrences; of the type Party)

### 1.46.3 Used by:

### 1.46.4 Derived Types:

### 1.46.5 Figure:

### 1.46.6 Schema Fragment:

```
<xsd:complexType name="TradeAmended">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      This message is DEPRECATED and should not be used in new
      implementations. See ContractCreated. A notification to inform
      downstream systems when a system that acts as source of trade
      information detects that a trade has been modified.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:element name="trade" type="Trade"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.47 TradeAmendment

### 1.47.1 Description:

A type describing the original trade and the amended trade.

### 1.47.2 Contents:

Either

**originalTrade** (exactly one occurrence; of the type Trade) The entire original trade details.

Or

**originalTradeIdentifier** (one or more occurrences; of the type PartyTradeIdentifier) The trade id of the original trade details.

**amendedTrade** (exactly one occurrence; of the type Trade) The representation of the amended trade.

### 1.47.3 Used by:

- Complex type: AllocationAmended

### 1.47.4 Derived Types:

### 1.47.5 Figure:

### 1.47.6 Schema Fragment:

```
<xsd:complexType name="TradeAmendment">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing the original trade and the amended trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:choice minOccurs="0">
      <xsd:element name="originalTrade" type="Trade">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The entire original trade details.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="originalTradeIdentifier" type="PartyTradeIdentifier" maxOccurs="unbound">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The trade id of the original trade details.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:choice>
    <xsd:element name="amendedTrade" type="Trade">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The representation of the amended trade.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.48 TradeAmendmentRequest

### 1.48.1 Description:

A request message for requesting an Amendment.

### 1.48.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**amendment** (exactly one occurrence; of the type Amendment)

**party** (one or more occurrences; of the type Party) One party element for each of the principal parties and any other party that is referenced.

### 1.48.3 Used by:

### 1.48.4 Derived Types:

### 1.48.5 Figure:

### 1.48.6 Schema Fragment:

```
<xsd:complexType name="TradeAmendmentRequest">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A request message for requesting an Amendment.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="RequestMessage">
      <xsd:sequence>
        <xsd:element name="amendment" type="Amendment"/>
        <xsd:element name="party" type="Party" minOccurs="2" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One party element for each of the principal parties and
              any other party that is referenced.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.49 TradeAmendmentResponse

### 1.49.1 Description:

A response to the request for an Amendment.

### 1.49.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ResponseMessage)

- A type refining the generic message content model to make it specific to response messages.

**amendment** (exactly one occurrence; of the type Amendment)

**party** (one or more occurrences; of the type Party) One party element for each of the principal parties and any other party that is referenced.

### 1.49.3 Used by:

### 1.49.4 Derived Types:

### 1.49.5 Figure:

### 1.49.6 Schema Fragment:

```
<xsd:complexType name="TradeAmendmentResponse">

  </xsd:complexContent>
</xsd:complexType>
```

## 1.50 TradeCancelled

### 1.50.1 Description:

This message is DEPRECATED and should not be used in new implementations. See ContractCancelled. A notification to inform downstream systems when a system that acts as source of trade information detects that a trade has been cancelled.

### 1.50.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

Either

**tradeIdentifier** (one or more occurrences; of the type TradeIdentifier)

Or

**trade** (exactly one occurrence; of the type Trade)

**party** (one or more occurrences; of the type Party)

### 1.50.3 Used by:

### 1.50.4 Derived Types:

### 1.50.5 Figure:

### 1.50.6 Schema Fragment:

```
<xsd:complexType name="TradeCancelled">
  <xsd:annotation>

**3 Groups**

## 3.1 NovationDetails.model

### 3.1.1 Description:

### 3.1.2 Contents:

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationTradeDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a trade. If this element is not specified, the novationTradeDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Transaction being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Transaction being novated.

**remainingTrade** (zero or one occurrence; of the type Trade) This element contains a description of the remaining portion of a partially novated trade.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

Either

**contractualSupplement** (zero or more occurrences; of the type ContractualSupplement) DEPRECATED - This element will be removed in the next major version of FpML. The element contractualTermsSupplement should be used instead. Definition: A contractual supplement (such as those published by ISDA) that will apply to the trade.

Or

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.
