## ***1 Global Simple Types***

## 1.1 SimplePricingStructureReference

### 1.1.1 Description:

Reference to a pricing structure or any derived components (i.e. yield curve).

### 1.1.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:IDREF)

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Schema Fragment:

```
<xsd:simpleType name="SimplePricingStructureReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to a pricing structure or any derived components (i.e.
      yield curve).
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:IDREF"/>
</xsd:simpleType>
```

## ***2 Global Complex Types***

## 2.1 BondReference

### 2.1.1 Description:

A type including a reference to a bond to support the representation of an asset swap or Condition Precedent Bond.

### 2.1.2 Contents:

**bond** (exactly one occurrence; of the type Bond) Defines the underlying asset when it is a bond.

**conditionPrecedentBond** (exactly one occurrence; of the type xsd:boolean) To indicate whether the Condition Precedent Bond is applicable. The swap contract is only valid if the bond is issued and if there is any dispute over the terms of fixed stream then the bond terms would be used.

**discrepancyClause** (zero or one occurrence; of the type xsd:boolean) To indicate whether the Discrepancy Clause is applicable.

### 2.1.3 Used by:

- Complex type: SwapAdditionalTerms

### 2.1.4 Derived Types:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:complexType name="BondReference">

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.2 BulletPayment

### 2.2.1 Description:

A product to represent a single cashflow.

### 2.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**payment** (exactly one occurrence; of the type Payment) A known payment between two parties.

### 2.2.3 Used by:

- Element: bulletPayment

### 2.2.4 Derived Types:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```

            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.3 Calculation

### 2.3.1 Description:

A type defining the parameters used in the calculation of fixed or floating calculation period amounts.

### 2.3.2 Contents:

Either

**notionalSchedule** (exactly one occurrence; of the type Notional) The notional amount or notional amount schedule.

Or

**fxLinkedNotionalSchedule** (exactly one occurrence; of the type FxLinkedNotionalSchedule) A notional amount schedule where each notional that applied to a calculation period is calculated with reference to a notional amount or notional amount schedule in a different currency by means of a spot currency exchange rate which is normally observed at the beginning of each period.

Either

**fixedRateSchedule** (exactly one occurrence; of the type Schedule) The fixed rate or fixed rate schedule expressed as explicit fixed rates and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

Or

**rateCalculation** (exactly one occurrence; of the type Rate) The base element for the floating rate calculation definitions.

**dayCountFraction** (exactly one occurrence; of the type DayCountFraction) The day count fraction.

**discounting** (zero or one occurrence; of the type Discounting) The parameters specifying any discounting conventions that may apply. This element must only be included if discounting applies.

**compoundingMethod** (zero or one occurrence; of the type CompoundingMethodEnum) If more than one calculation period contributes to a single payment amount this element specifies whether compounding is applicable, and if so, what compounding method is to be used. This element must only be included when more than one calculation period contributes to a single payment amount.

### 2.3.3 Used by:

</xsd:complexType>

```

## 2.4 CalculationPeriod

### 2.4.1 Description:

A type defining the parameters used in the calculation of a fixed or floating rate calculation period amount. This type forms part of cashflows representation of a swap stream.

### 2.4.2 Contents:

**unadjustedStartDate** (zero or one occurrence; of the type xsd:date)

**unadjustedEndDate** (zero or one occurrence; of the type xsd:date)

**adjustedStartDate** (zero or one occurrence; of the type xsd:date) The calculation period start date, adjusted according to any relevant business day convention.

**adjustedEndDate** (zero or one occurrence; of the type xsd:date) The calculation period end date, adjusted according to any relevant business day convention.

**calculationPeriodNumberOfDays** (zero or one occurrence; of the type xsd:positiveInteger) The number of days from the adjusted effective / start date to the adjusted termination / end date calculated in accordance with the applicable day count fraction.

Either

**notionalAmount** (exactly one occurrence; of the type xsd:decimal) The amount that a cashflow will accrue interest on.

Or

**fxLinkedNotionalAmount** (exactly one occurrence; of the type FxLinkedNotionalAmount) The amount that a cashflow will accrue interest on. This is the calculated amount of the fx linked - ie the other currency notional amount multiplied by the appropriate fx spot rate.

Either

**floatingRateDefinition** (exactly one occurrence; of the type FloatingRateDefinition) The floating rate reset information for the calculation period.

Or

**fixedRate** (exactly one occurrence; of the type xsd:decimal) The calculation period fixed rate. A per annum rate, expressed as a decimal. A fixed rate of 5% would be represented as 0.05.

**dayCountYearFraction** (zero or one occurrence; of the type xsd:decimal) The year fraction value of the calculation period, result of applying the ISDA rules for day count fraction defined in the ISDA Annex.

**forecastAmount** (zero or one occurrence; of the type Money) The amount representing the forecast of the accrued value of the calculation period. An intermediate value used to generate the forecastPaymentAmount in the PaymentCalculationPeriod.

**forecastRate** (zero or one occurrence; of the type xsd:decimal) A value representing the forecast rate used to calculate the forecast future value of the accrual period. This is a calculated rate determined based on averaging the rates in the rateObservation elements, and incorporates all of the rate treatment and averaging rules. A value of 1% should be represented as 0.01

## 2.5 CalculationPeriodAmount

### 2.5.1 Description:

A type defining the parameters used in the calculation of fixed or floating rate calculation period amounts or for specifying a known calculation period amount or known amount schedule.

### 2.5.2 Contents:

Either

**calculation** (exactly one occurrence; of the type Calculation) The parameters used in the calculation of fixed or floating rate calculation period amounts.

Or

**knownAmountSchedule** (exactly one occurrence; of the type AmountSchedule) The known calculation period amount or a known amount schedule expressed as explicit known amounts and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

### 2.5.3 Used by:

- Complex type: InterestRateStream

### 2.5.4 Derived Types:

### 2.5.5 Figure:

### 2.5.6 Schema Fragment:

  </xsd:choice>
</xsd:complexType>
```

## 2.6 CalculationPeriodDates

### 2.6.1 Description:

A type defining the parameters used to generate the calculation period dates schedule, including the specification of any initial or final stub calculation periods. A calculation period schedule consists of an optional initial stub calculation period, one or more regular calculation periods and an optional final stub calculation period. In the absence of any initial or final stub calculation periods, the regular part of the calculation period schedule is assumed to be between the effective date and the termination date. No implicit stubs are allowed, i.e. stubs must be explicitly specified using an appropriate combination of firstPeriodStartDate, firstRegularPeriodStartDate and lastRegularPeriodEndDate.

### 2.6.2 Contents:

Either

**effectiveDate** (exactly one occurrence; of the type AdjustableDate) The first day of the term of the trade. This day may be subject to adjustment in accordance with a business day convention.

Or

**relativeEffectiveDate** (exactly one occurrence; of the type AdjustedRelativeDateOffset) Defines the effective date.

Either

**terminationDate** (exactly one occurrence; of the type AdjustableDate) The last day of the term of the trade. This day may be subject to adjustment in accordance with a business day convention.

Or

**relativeTerminationDate** (exactly one occurrence; of the type RelativeDateOffset) The term/maturity of the swap, express as a tenor (typically in years).

**calculationPeriodDatesAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention to apply to each calculation period end date if it would otherwise fall on a day that is not a business day in the specified financial business centers.

**firstPeriodStartDate** (zero or one occurrence; of the type AdjustableDate) The start date of the calculation period if the date falls before the effective date. It must only be specified if it is not equal to the effective date. This date may be subject to adjustment in accordance with a business day convention.

**firstRegularPeriodStartDate** (zero or one occurrence; of the type xsd:date) The start date of the regular part of the calculation period schedule. It must only be specified if there is an initial stub calculation period. This day may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

**lastRegularPeriodEndDate** (zero or one occurrence; of the type xsd:date) The end date of the regular part of the calculation period schedule. It must only be specified if there is a final stub calculation period. This day may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

**stubPeriodType** (zero or one occurrence; of the type StubPeriodTypeEnum) Method to allocate any irregular period remaining after regular periods have been allocated between the effective and termination date.

**calculationPeriodFrequency** (exactly one occurrence; of the type CalculationPeriodFrequency) The frequency at which calculation period end dates occur with the regular part of the calculation period schedule and their roll date convention.

## 2.7 CalculationPeriodDatesReference

### 2.7.1 Description:

Reference to a calculation period dates component.

### 2.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- Specifies the anchor as an href attribute. The href attribute value is a pointer style reference to the element or component elsewhere in the document where the anchor is defined.

### 2.7.3 Used by:

- Complex type: NotionalStepRule
- Complex type: PaymentDates
- Complex type: ResetDates
- Complex type: StubCalculationPeriodAmount

### 2.7.4 Derived Types:

### 2.7.5 Figure:

### 2.7.6 Schema Fragment:

```
<xsd:complexType name="CalculationPeriodDatesReference">

  </xsd:complexContent>
</xsd:complexType>
```

## 2.8 CancelableProvision

### 2.8.1 Description:

A type defining the right of a party to cancel a swap transaction on the specified exercise dates. The provision is for 'walkaway' cancellation (i.e. the fair value of the swap is not paid). A fee payable on exercise can be specified.

### 2.8.2 Contents:

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseNotice** (zero or one occurrence; of the type ExerciseNotice) Definition of the party to whom notice of exercise should be given.

**followUpConfirmation** (exactly one occurrence; of the type xsd:boolean) A flag to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

**cancelableProvisionAdjustedDates** (zero or one occurrence; of the type CancelableProvisionAdjustedDates) The adjusted dates associated with a cancelable provision. These dates have been adjusted for any applicable business day convention.

### 2.8.3 Used by:

- Complex type: Swap

### 2.8.4 Derived Types:

### 2.8.5 Figure:

### 2.8.6 Schema Fragment:

</xsd:complexType>
```

## 2.9 CancelableProvisionAdjustedDates

### 2.9.1 Description:

A type to define the adjusted dates for a cancelable provision on a swap transaction.

### 2.9.2 Contents:

**cancellationEvent** (one or more occurrences; of the type CancellationEvent) The adjusted dates for an individual cancellation date.

### 2.9.3 Used by:

- Complex type: CancelableProvision

### 2.9.4 Derived Types:

### 2.9.5 Figure:

### 2.9.6 Schema Fragment:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.10 CancellationEvent

### 2.10.1 Description:

The adjusted dates for a specific cancellation date, including the adjusted exercise date and adjusted termination date.

### 2.10.2 Contents:

**adjustedExerciseDate** (exactly one occurrence; of the type xsd:date) The date on which option exercise takes place. This date should already be adjusted for any applicable business day convention.

**adjustedEarlyTerminationDate** (exactly one occurrence; of the type xsd:date) The early termination date that is applicable if an early termination provision is exercised. This date should already be adjusted for any applicable business day convention.

### 2.10.3 Used by:

- Complex type: CancelableProvisionAdjustedDates

### 2.10.4 Derived Types:

### 2.10.5 Figure:

### 2.10.6 Schema Fragment:

```

## 2.11 CapFloor

### 2.11.1 Description:

A type defining an interest rate cap, floor, or cap/floor strategy (e.g. collar) product.

### 2.11.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**capFloorStream** (exactly one occurrence; of the type InterestRateStream)

**premium** (zero or more occurrences; of the type Payment) The option premium amount payable by buyer to seller on the specified payment date.

**additionalPayment** (zero or more occurrences; of the type Payment) Additional payments between the principal parties.

**earlyTerminationProvision** (zero or one occurrence; of the type EarlyTerminationProvision) Parameters specifying provisions relating to the optional and mandatory early termination of a CapFloor transaction.

### 2.11.3 Used by:

- Element: capFloor

### 2.11.4 Derived Types:

### 2.11.5 Figure:

### 2.11.6 Schema Fragment:

## 2.12 Cashflows

### 2.12.1 Description:

A type defining the cashflow representation of a swap trade.

### 2.12.2 Contents:

**cashflowsMatchParameters** (exactly one occurrence; of the type xsd:boolean) A true/false flag to indicate whether the cashflows match the parametric definition of the stream, i.e. whether the cashflows could be regenerated from the parameters without loss of information.

**principalExchange** (zero or more occurrences; of the type PrincipalExchange) The initial, intermediate and final principal exchange amounts. Typically required on cross currency interest rate swaps where actual exchanges of principal occur. A list of principal exchange elements may be ordered in the document by ascending adjusted principal exchange date. An FpML document containing an unordered principal exchange list is still regarded as a conformant document.

**paymentCalculationPeriod** (zero or more occurrences; of the type PaymentCalculationPeriod) The adjusted payment date and associated calculation period parameters required to calculate the actual or projected payment amount. A list of payment calculation period elements may be ordered in the document by ascending adjusted payment date. An FpML document containing an unordered list of payment calculation periods is still regarded as a conformant document.

### 2.12.3 Used by:

- Complex type: InterestRateStream

## 2.13 CashPriceMethod

### 2.13.1 Description:

A type defining the parameters necessary for each of the ISDA cash price methods for cash settlement.

### 2.13.2 Contents:

**cashSettlementReferenceBanks** (zero or one occurrence; of the type CashSettlementReferenceBanks) A container for a set of reference institutions. These reference institutions may be called upon to provide rate quotations as part of the method to determine the applicable cash settlement amount. If institutions are not specified, it is assumed that reference institutions will be agreed between the parties on the exercise date, or in the case of swap transaction to which mandatory early termination is applicable, the cash settlement valuation date.

**cashSettlementCurrency** (exactly one occurrence; of the type Currency) The currency in which the cash settlement amount will be calculated and settled.

**quotationRateType** (exactly one occurrence; of the type QuotationRateTypeEnum) Which rate quote is to be observed, either Bid, Mid, Offer or Exercising Party Pays. The meaning of Exercising Party Pays is defined in the 2000 ISDA Definitions, Section 17.2. Certain Definitions Relating to Cash Settlement, paragraph (j)

### 2.13.3 Used by:

## 2.14 CashSettlement

### 2.14.1 Description:

A type to define the cash settlement terms for a product where cash settlement is applicable.

### 2.14.2 Contents:

**cashSettlementValuationTime** (zero or one occurrence; of the type BusinessCenterTime) The time of the cash settlement valuation date when the cash settlement amount will be determined according to the cash settlement method if the parties have not otherwise been able to agree the cash settlement amount.

**cashSettlementValuationDate** (zero or one occurrence; of the type RelativeDateOffset) The date on which the cash settlement amount will be determined according to the cash settlement method if the parties have not otherwise been able to agree the cash settlement amount.

**cashSettlementPaymentDate** (zero or one occurrence; of the type CashSettlementPaymentDate) The date on which the cash settlement amount will be paid, subject to adjustment in accordance with any applicable business day convention. This component would not be present for a mandatory early termination provision where the cash settlement payment date is the mandatory early termination date.

### 2.14.3 Used by:

- Complex type: MandatoryEarlyTermination
- Complex type: OptionalEarlyTermination
- Complex type: Swaption

## 2.15 CashSettlementPaymentDate

### 2.15.1 Description:

A type defining the cash settlement payment date(s) as either a set of explicit dates, together with applicable adjustments, or as a date relative to some other (anchor) date, or as any date in a range of contiguous business days.

### 2.15.2 Contents:

Either

**adjustableDates** (exactly one occurrence; of the type AdjustableDates) A series of dates that shall be subject to adjustment if they would otherwise fall on a day that is not a business day in the specified business centers, together with the convention for adjusting the date.

Or

**relativeDate** (exactly one occurrence; of the type RelativeDateOffset) A date specified as some offset to another date (the anchor date).

Or

**businessDateRange** (exactly one occurrence; of the type BusinessDateRange) A range of contiguous business days.

## 2.16 CollateralizedCashPriceMethod

### 2.16.1 Description:

A type defining the parameters required for each of the ISDA defined yield curve methods for cash settlement. See the 2021 ISDA Definitions, section 18.2.6.

### 2.16.2 Contents:

**cashSettlementCurrency** (zero or one occurrence; of the type Currency) The currency or currencies in which the cash settlement amount will be calculated and settled. (2 Currencies are supported for cross-currency settlement methods.)

**settlementRateSource** (zero or one occurrence; of the type SettlementRateSource) The method for obtaining a settlement rate. This may be from some information source (e.g. Reuters) or from a set of reference banks.

**quotationRateType** (exactly one occurrence; of the type QuotationRateTypeEnum) Which rate quote is to be observed, either Bid, Mid, Offer or Exercising Party Pays. The meaning of Exercising Party Pays is defined in the 2000 ISDA Definitions, Section 17.2. Certain Definitions Relating to Cash Settlement, paragraph (j)

**mutuallyAgreedClearinghouse** (zero or one occurrence; of the type MutuallyAgreedClearinghouse) This may be used to specify a "mutually-agreed clearinghouse" for settlement. This is only applicable for cash-settled swaptions.

**agreedDiscountRate** (zero or one occurrence; of the type BenchmarkRate) This may be used to indicate the discount rate to be used for cash collateral for cash settlement purposes.

### 2.16.3 Used by:

## 2.17 CrossCurrencyMethod

### 2.17.1 Description:

### 2.17.2 Contents:

**cashSettlementReferenceBanks** (zero or one occurrence; of the type CashSettlementReferenceBanks) A container for a set of reference institutions. These reference institutions may be called upon to provide rate quotations as part of the method to determine the applicable cash settlement amount. If institutions are not specified, it is assumed that reference institutions will be agreed between the parties on the exercise date, or in the case of swap transaction to which mandatory early termination is applicable, the cash settlement valuation date.

**cashSettlementCurrency** (exactly one occurrence; of the type Currency) The currency, or currencies, in which the cash settlement amount(s) will be calculated and settled. While the order in which the currencies are stated is unimportant, the cash settlement currency or currencies must correspond to one or both of the constituent currencies of the swap transaction.

**quotationRateType** (exactly one occurrence; of the type QuotationRateTypeEnum) Which rate quote is to be observed, either Bid, Mid, Offer or Exercising Party Pays. The meaning of Exercising Party Pays is defined in the 2000 ISDA Definitions, Section 17.2. Certain Definitions Relating to Cash Settlement, paragraph (j)

## 2.18 DateRelativeToPaymentDates

### 2.18.1 Description:

A type to provide the ability to point to multiple payment nodes in the document through the unbounded paymentDatesReference.

### 2.18.2 Contents:

**paymentDatesReference** (one or more occurrences; of the type PaymentDatesReference) A set of href pointers to payment dates defined somewhere else in the document.

### 2.18.3 Used by:

- Complex type: FxFixingDate

### 2.18.4 Derived Types:

  </xsd:sequence>
</xsd:complexType>
```

## 2.19 Discounting

### 2.19.1 Description:

A type defining discounting information. The 2000 ISDA definitions, section 8.4. discounting (related to the calculation of a discounted fixed amount or floating amount) apply. This type must only be included if discounting applies.

### 2.19.2 Contents:

**discountingType** (exactly one occurrence; of the type DiscountingTypeEnum) The discounting method that is applicable.

**discountRate** (zero or one occurrence; of the type xsd:decimal) A discount rate, expressed as a decimal, to be used in the calculation of a discounted amount. A discount amount of 5% would be represented as 0.05.

**discountRateDayCountFraction** (zero or one occurrence; of the type DayCountFraction) A discount day count fraction to be used in the calculation of a discounted amount.

### 2.19.3 Used by:

- Complex type: Calculation

## 2.20 EarlyTerminationEvent

### 2.20.1 Description:

A type to define the adjusted dates associated with an early termination provision.

### 2.20.2 Contents:

**adjustedExerciseDate** (exactly one occurrence; of the type xsd:date) The date on which option exercise takes place. This date should already be adjusted for any applicable business day convention.

**adjustedEarlyTerminationDate** (exactly one occurrence; of the type xsd:date) The early termination date that is applicable if an early termination provision is exercised. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementValuationDate** (exactly one occurrence; of the type xsd:date) The date by which the cash settlement amount must be agreed. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementPaymentDate** (exactly one occurrence; of the type xsd:date) The date on which the cash settlement amount is paid. This date should already be adjusted for any applicable business day convention.

**adjustedExerciseFeePaymentDate** (zero or one occurrence; of the type xsd:date) The date on which the exercise fee amount is paid. This date should already be adjusted for any applicable business day convention.

### 2.20.3 Used by:

  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.22 ExerciseEvent

### 2.22.1 Description:

A type defining the adjusted dates associated with a particular exercise event.

### 2.22.2 Contents:

**adjustedExerciseDate** (exactly one occurrence; of the type xsd:date) The date on which option exercise takes place. This date should already be adjusted for any applicable business day convention.

**adjustedRelevantSwapEffectiveDate** (exactly one occurrence; of the type xsd:date) The effective date of the underlying swap associated with a given exercise date. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementValuationDate** (zero or one occurrence; of the type xsd:date) The date by which the cash settlement amount must be agreed. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementPaymentDate** (zero or one occurrence; of the type xsd:date) The date on which the cash settlement amount is paid. This date should already be adjusted for any applicable business day convention.

**adjustedExerciseFeePaymentDate** (zero or one occurrence; of the type xsd:date) The date on which the exercise fee amount is paid. This date should already be adjusted for any applicable business day convention.

### 2.22.3 Used by:

- Complex type: SwaptionAdjustedDates

### 2.22.4 Derived Types:

## 2.23 ExercisePeriod

### 2.23.1 Description:

This defines the time interval to the start of the exercise period, i.e. the earliest exercise date, and the frequency of subsequent exercise dates (if any).

### 2.23.2 Contents:

**earliestExerciseDateTenor** (exactly one occurrence; of the type Interval) The time interval to the first (and possibly only) exercise date in the exercise period.

**exerciseFrequency** (zero or one occurrence; of the type Interval) The frequency of subsequent exercise dates in the exercise period following the earliest exercise date. An interval of 1 day should be used to indicate an American style exercise period.

### 2.23.3 Used by:

### 2.23.4 Derived Types:

  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.24 ExtendibleProvision

### 2.24.1 Description:

A type defining an option to extend an existing swap transaction on the specified exercise dates for a term ending on the specified new termination date.

### 2.24.2 Contents:

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseNotice** (zero or one occurrence; of the type ExerciseNotice) Definition of the party to whom notice of exercise should be given.

**followUpConfirmation** (exactly one occurrence; of the type xsd:boolean) A flag to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

**extendibleProvisionAdjustedDates** (zero or one occurrence; of the type ExtendibleProvisionAdjustedDates) The adjusted dates associated with an extendible provision. These dates have been adjusted for any applicable business day convention.

### 2.24.3 Used by:

- Complex type: Swap

### 2.24.4 Derived Types:

## 2.26 ExtensionEvent

### 2.26.1 Description:

A type to define the adjusted dates associated with an individual extension event.

### 2.26.2 Contents:

**adjustedExerciseDate** (exactly one occurrence; of the type xsd:date) The date on which option exercise takes place. This date should already be adjusted for any applicable business day convention.

**adjustedExtendedTerminationDate** (exactly one occurrence; of the type xsd:date) The termination date if an extendible provision is exercised. This date should already be adjusted for any applicable business day convention.

### 2.26.3 Used by:

- Complex type: ExtendibleProvisionAdjustedDates

### 2.26.4 Derived Types:

### 2.26.5 Figure:

## 2.27 FloatingRateDefinition

### 2.27.1 Description:

A type defining parameters associated with a floating rate reset. This type forms part of the cashflows representation of a stream.

### 2.27.2 Contents:

**calculatedRate** (zero or one occurrence; of the type xsd:decimal) The final calculated rate for a calculation period after any required averaging of rates A calculated rate of 5% would be represented as 0.05.

**rateObservation** (zero or more occurrences; of the type RateObservation) The details of a particular rate observation, including the fixing date and observed rate. A list of rate observation elements may be ordered in the document by ascending adjusted fixing date. An FpML document containing an unordered list of rate observations is still regarded as a conformant document.

**floatingRateMultiplier** (zero or one occurrence; of the type xsd:decimal) A rate multiplier to apply to the floating rate. The multiplier can be a positive or negative decimal. This element should only be included if the multiplier is not equal to 1 (one).

**spread** (zero or one occurrence; of the type xsd:decimal) The ISDA Spread, if any, which applies for the calculation period. The spread is a per annum rate, expressed as a decimal. For purposes of determining a calculation period amount, if positive the spread will be added to the floating rate and if negative the spread will be subtracted from the floating rate. A positive 10 basis point (0.1%) spread would be represented as 0.001.

**capRate** (zero or more occurrences; of the type Strike) The cap rate, if any, which applies to the floating rate for the calculation period. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain strike level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

**floorRate** (zero or more occurrences; of the type Strike) The floor rate, if any, which applies to the floating rate for the calculation period. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. The floor rate of 5% would be represented as 0.05.

## 2.28 Fra

### 2.28.1 Description:

A type defining a Forward Rate Agreement (FRA) product.

### 2.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this is the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**adjustedEffectiveDate** (exactly one occurrence; of the type RequiredIdentifierDate) The start date of the calculation period. This date should already be adjusted for any applicable business day convention. This is also the date when the observed rate is applied, the reset date.

**adjustedTerminationDate** (exactly one occurrence; of the type xsd:date) The end date of the calculation period. This date should already be adjusted for any applicable business day convention.

**paymentDate** (exactly one occurrence; of the type AdjustableDate) The payment date. This date is subject to adjustment in accordance with any applicable business day convention.

**fixingDateOffset** (exactly one occurrence; of the type RelativeDateOffset) Specifies the fixing date relative to the reset date in terms of a business days offset and an associated set of financial business centers. Normally these offset calculation rules will be those specified in the ISDA definition for the relevant floating rate index (ISDA's Floating Rate Option). However, non-standard offset calculation rules may apply for a trade if mutually agreed by the principal parties to the transaction. The href attribute on the dateRelativeTo element should reference the id attribute on the adjustedEffectiveDate element.

**dayCountFraction** (exactly one occurrence; of the type DayCountFraction) The day count fraction.

**calculationPeriodNumberOfDays** (exactly one occurrence; of the type xsd:positiveInteger) The number of days from the adjusted effective date to the adjusted termination date calculated in accordance with the applicable day count fraction.

**notional** (exactly one occurrence; of the type Money) The notional amount.

**fixedRate** (exactly one occurrence; of the type xsd:decimal) The calculation period fixed rate. A per annum rate, expressed as a decimal. A fixed rate of 5% would be represented as 0.05.

**floatingRateIndex** (exactly one occurrence; of the type FloatingRateIndex)

**indexTenor** (one or more occurrences; of the type Interval) The ISDA Designated Maturity, i.e. the tenor of the floating rate.

**fraDiscounting** (exactly one occurrence; of the type FraDiscountingEnum) Specifies whether discounting applies and, if so, what type.

## 2.29 FxFixingDate

### 2.29.1 Description:

A type that is extending the Offset structure for providing the ability to specify an FX fixing date as an offset to dates specified somewhere else in the document.

### 2.29.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Offset)

- A type defining an offset used in calculating a new date relative to a reference date. Currently, the only offsets defined are expected to be expressed as either calendar or business day offsets.

**businessDayConvention** (exactly one occurrence; of the type BusinessDayConventionEnum) The convention for adjusting a date if it would otherwise fall on a day that is not a business day.

Either

**businessCentersReference** (exactly one occurrence; of the type BusinessCentersReference) A pointer style reference to a set of financial business centers defined elsewhere in the document. This set of business centers is used to determine whether a particular day is a business day or not.

Or

**businessCenters** (exactly one occurrence; of the type BusinessCenters)

**dateRelativeToPaymentDates** (exactly one occurrence; of the type DateRelativeToPaymentDates) The payment date references on which settlements in non-deliverable currency are due and will then have to be converted according to the terms specified through the other parts of the nonDeliverableSettlement structure.

### 2.29.3 Used by:

- Complex type: NonDeliverableSettlement

### 2.29.4 Derived Types:

### 2.29.5 Figure:

### 2.29.6 Schema Fragment:

```

</xsd:complexType>

## 2.30 FxLinkedNotionalAmount

### 2.30.1 Description:

A type to describe the cashflow representation for fx linked notionals.

### 2.30.2 Contents:

**resetDate** (zero or one occurrence; of the type xsd:date)

**adjustedFxSpotFixingDate** (zero or one occurrence; of the type xsd:date) The date on which the fx spot rate is observed. This date should already be adjusted for any applicable business day convention.

**observedFxSpotRate** (zero or one occurrence; of the type xsd:decimal) The actual observed fx spot rate.

**notionalAmount** (zero or one occurrence; of the type xsd:decimal) The calculation period notional amount.

### 2.30.3 Used by:

- Complex type: CalculationPeriod

### 2.30.4 Derived Types:

```

## 2.31 FxLinkedNotionalSchedule

### 2.31.1 Description:

A type to describe a notional schedule where each notional that applies to a calculation period is calculated with reference to a notional amount or notional amount schedule in a different currency by means of a spot currency exchange rate which is normally observed at the beginning of each period.

### 2.31.2 Contents:

**constantNotionalScheduleReference** (exactly one occurrence; of the type `ScheduleReference`) A pointer style reference to the associated constant notional schedule defined elsewhere in the document which contains the currency amounts which will be converted into the varying notional currency amounts using the spot currency exchange rate.

**initialValue** (zero or one occurrence; of the type `xsd:decimal`) The initial currency amount for the varying notional.

**varyingNotionalCurrency** (exactly one occurrence; of the type `xsd:string`) The currency of the varying notional amount, i.e. the notional amount being determined periodically based on observation of a spot currency exchange rate.

**varyingNotionalFixingDates** (exactly one occurrence; of the type `RelativeDateOffset`) The dates on which spot currency exchange rates are observed for purposes of determining the varying notional currency amount that will apply to a calculation period.

**fxSpotRateSource** (exactly one occurrence; of the type `FxSpotRateSource`) The information source and time at which the spot currency exchange rate will be observed.

**varyingNotionalInterimExchangePaymentDates** (exactly one occurrence; of the type `RelativeDateOffset`) The dates on which interim exchanges of notional are paid. Interim exchanges will arise as a result of changes in the spot currency exchange amount or changes in the constant notional schedule (e.g. amortization).

### 2.31.3 Used by:

## 2.32 InflationRateCalculation

### 2.32.1 Description:

A type defining the components specifying an Inflation Rate Calculation

### 2.32.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FloatingRateCalculation)

- A type defining the floating rate and definitions relating to the calculation of floating rate amounts.

**inflationLag** (exactly one occurrence; of the type Offset) an offsetting period from the payment date which determines the reference period for which the inflation index is onserved.

**indexSource** (exactly one occurrence; of the type RateSourcePage) The reference source such as Reuters or Bloomberg.

**mainPublication** (zero or one occurrence; of the type MainPublication) The current main publication source such as relevant web site or a government body.

**interpolationMethod** (exactly one occurrence; of the type InterpolationMethod) The method used when calculating the Inflation Index Level from multiple points - the most common is Linear.

**initialIndexLevel** (zero or one occurrence; of the type xsd:decimal) initial known index level for the first calculation period.

### 2.32.3 Used by:

- Element: inflationRateCalculation

### 2.32.4 Derived Types:

### 2.32.5 Figure:

## 2.33 InterestRateStream

### 2.33.1 Description:

A type defining the components specifying an interest rate stream, including both a parametric and cashflow representation for the stream of payments.

### 2.33.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**calculationPeriodDates** (exactly one occurrence; of the type CalculationPeriodDates) The calculation periods dates schedule.

**paymentDates** (exactly one occurrence; of the type PaymentDates) The payment dates schedule.

**resetDates** (zero or one occurrence; of the type ResetDates) The reset dates schedule. The reset dates schedule only applies for a floating rate stream.

**calculationPeriodAmount** (exactly one occurrence; of the type CalculationPeriodAmount) The calculation period amount parameters.

**stubCalculationPeriodAmount** (zero or one occurrence; of the type StubCalculationPeriodAmount) The stub calculation period amount parameters. This element must only be included if there is an initial or final stub calculation period. Even then, it must only be included if either the stub references a different floating rate tenor to the regular calculation periods, or if the stub is calculated as a linear interpolation of two different floating rate tenors, or if a specific stub rate or stub amount has been negotiated.

**principalExchanges** (zero or one occurrence; of the type PrincipalExchanges) The true/false flags indicating whether initial, intermediate or final exchanges of principal should occur.

**cashflows** (zero or one occurrence; of the type Cashflows) The cashflows representation of the swap stream.

**settlementProvision** (zero or one occurrence; of the type SettlementProvision) A provision that allows the specification of settlement terms, occurring when the settlement currency is different to the notional currency of the trade.

**formula** (zero or one occurrence; of the type Formula) An interest rate derivative formula.

## 2.34 MandatoryEarlyTermination

### 2.34.1 Description:

A type to define an early termination provision for which exercise is mandatory.

### 2.34.2 Contents:

**mandatoryEarlyTerminationDate** (exactly one occurrence; of the type AdjustableDate) The early termination date associated with a mandatory early termination of a swap.

**calculationAgent** (exactly one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination.

**cashSettlement** (exactly one occurrence; of the type CashSettlement) If specified, this means that cash settlement is applicable to the transaction and defines the parameters associated with the cash settlement procedure. If not specified, then physical settlement is applicable.

**mandatoryEarlyTerminationAdjustedDates** (zero or one occurrence; of the type MandatoryEarlyTerminationAdjustedDates) The adjusted dates associated with a mandatory early termination provision. These dates have been adjusted for any applicable business day convention.

### 2.34.3 Used by:

## 2.35 MandatoryEarlyTerminationAdjustedDates

### 2.35.1 Description:

A type defining the adjusted dates associated with a mandatory early termination provision.

### 2.35.2 Contents:

**adjustedEarlyTerminationDate** (exactly one occurrence; of the type xsd:date) The early termination date that is applicable if an early termination provision is exercised. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementValuationDate** (exactly one occurrence; of the type xsd:date) The date by which the cash settlement amount must be agreed. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementPaymentDate** (exactly one occurrence; of the type xsd:date) The date on which the cash settlement amount is paid. This date should already be adjusted for any applicable business day convention.

## 2.36 MidMarketValuation

### 2.36.1 Description:

This type is a wrapper holding several different mid-market valuation methods described in the 2021 ISDA Definitions.

### 2.36.2 Contents:

Either

**indicativeQuotations** (exactly one occurrence; of the type MidMarketValuationMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2021 ISDA Definitions, Section 18.2.1.

Or

**indicativeQuotationsAlternate** (exactly one occurrence; of the type MidMarketValuationMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2021 ISDA Definitions, Section 18.2.2.

Or

**calculationAgentDetermination** (exactly one occurrence; of the type MidMarketValuationMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2021 ISDA Definitions, Section 18.2.3.

### 2.36.3 Used by:

## 2.37 MidMarketValuationMethod

### 2.37.1 Description:

This type is a generic structure that can represent the fields of several mid-market valuation methods described in the 2021 ISDA Definitions.

### 2.37.2 Contents:

**cashSettlementCurrency** (exactly one occurrence; of the type Currency) The currency, or currencies, in which the cash settlement amount(s) will be calculated and settled. While the order in which the currencies are stated is unimportant, the cash settlement currency or currencies must correspond to one or both of the constituent currencies of the swap transaction.

**applicableCsa** (zero or one occurrence; of the type CsaTypeEnum) This may be used to whaty type of CSA (credit support annex/agreement) is to be used for cash settlement purposes.

**cashSettlementReferenceBanks** (zero or one occurrence; of the type CashSettlementReferenceBanks) A container for a set of reference institutions. These reference institutions may be called upon to provide rate quotations as part of the method to determine the applicable cash settlement amount. If institutions are not specified, it is assumed that reference institutions will be agreed between the parties on the exercise date, or in the case of swap transaction to which mandatory early termination is applicable, the cash settlement valuation date.

**cashCollateralCurrency** (zero or one occurrence; of the type Currency) This may be used to indicate the currency of cash collateral for cash settlement purposes.

**cashCollateralInterestRate** (zero or one occurrence; of the type BenchmarkRate) This may be used to indicate the interest rate to be used for cash collateral for cash settlement purposes.

**agreedDiscountRate** (zero or one occurrence; of the type BenchmarkRate) This may be used to indicate the discount rate to be used for cash collateral for cash settlement purposes.

## 2.38 NonDeliverableSettlement

### 2.38.1 Description:

A type defining the parameters used when the reference currency of the swapStream is non-deliverable.

### 2.38.2 Contents:

**referenceCurrency** (exactly one occurrence; of the type Currency) The currency in which the swap stream is denominated in.

**fxFixingDate** (exactly one occurrence; of the type FxFixingDate) The fixing date(s) on which the currency rate will be determined for the purpose of specifying the amount in deliverable currency.

**settlementRateOption** (exactly one occurrence; of the type SettlementRateOption) The rate source for the conversion to the settlement currency. This source is specified through a scheme that reflects the terms of the Annex A to the 1998 FX and Currency Option Definitions.

### 2.38.3 Used by:

- Complex type: SettlementProvision

## 2.39 Notional

### 2.39.1 Description:

An type defining the notional amount or notional amount schedule associated with a swap stream. The notional schedule will be captured explicitly, specifying the dates that the notional changes and the outstanding notional amount that applies from that date. A parametric representation of the rules defining the notional step schedule can optionally be included.

### 2.39.2 Contents:

**notionalStepSchedule** (exactly one occurrence; of the type AmountSchedule) The notional amount or notional amount schedule expressed as explicit outstanding notional amounts and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

**notionalStepParameters** (zero or one occurrence; of the type NotionalStepRule) A parametric representation of the notional step schedule, i.e. parameters used to generate the notional schedule.

### 2.39.3 Used by:

- Complex type: Calculation

### 2.39.4 Derived Types:

### 2.39.5 Figure:

## 2.40 NotionalStepRule

### 2.40.1 Description:

A type defining a parametric representation of the notional step schedule, i.e. parameters used to generate the notional balance on each step date. The step change in notional can be expressed in terms of either a fixed amount or as a percentage of either the initial notional or previous notional amount. This parametric representation is intended to cover the more common amortizing/accreting.

### 2.40.2 Contents:

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

**stepFrequency** (exactly one occurrence; of the type Interval) The frequency at which the step changes occur. This frequency must be a multiple of the stream calculation period frequency.

**firstNotionalStepDate** (exactly one occurrence; of the type xsd:date) Effective date of the first change in notional (i.e. a calculation period start date).

**lastNotionalStepDate** (exactly one occurrence; of the type xsd:date) Effective date of the last change in notional (i.e. a calculation period start date).

Either

**notionalStepAmount** (exactly one occurrence; of the type xsd:decimal) The explicit amount that the notional changes on each step date. This can be a positive or negative amount.

## 2.41 OptionalEarlyTermination

### 2.41.1 Description:

A type defining an early termination provision where either or both parties have the right to exercise.

### 2.41.2 Contents:

**singlePartyOption** (zero or one occurrence; of the type SinglePartyOption) If optional early termination is not available to both parties then this component specifies the buyer and seller of the option.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseNotice** (zero or more occurrences; of the type ExerciseNotice) Definition of the party to whom notice of exercise should be given.

**followUpConfirmation** (zero or one occurrence; of the type xsd:boolean) A flag to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

**calculationAgent** (exactly one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination.

**cashSettlement** (exactly one occurrence; of the type CashSettlement) If specified, this means that cash settlement is applicable to the transaction and defines the parameters associated with the cash settlement procedure. If not specified, then physical settlement is applicable.

**optionalEarlyTerminationAdjustedDates** (zero or one occurrence; of the type OptionalEarlyTerminationAdjustedDates) An early termination provision to terminate the trade at fair value where one or both parties have the right to decide on termination.

### 2.41.3 Used by:

## 2.44 PaymentCalculationPeriod

### 2.44.1 Description:

A type defining the adjusted payment date and associated calculation period parameters required to calculate the actual or projected payment amount. This type forms part of the cashflow representation of a swap stream.

### 2.44.2 Contents:

**unadjustedPaymentDate** (zero or one occurrence; of the type xsd:date)

**adjustedPaymentDate** (zero or one occurrence; of the type xsd:date) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component (all dates the Cashflows type are adjusted payment dates).

Either

**calculationPeriod** (one or more occurrences; of the type CalculationPeriod) The parameters used in the calculation of a fixed or floating rate calculation period amount. A list of calculation period elements may be ordered in the document by ascending start date. An FpML document which contains an unordered list of calculation periods is still regarded as a conformant document.

Or

**fixedPaymentAmount** (exactly one occurrence; of the type xsd:decimal) A known fixed payment amount.

**discountFactor** (zero or one occurrence; of the type xsd:decimal) A decimal value representing the discount factor used to calculate the present value of cash flow.

**forecastPaymentAmount** (zero or one occurrence; of the type Money) A monetary amount representing the forecast of the future value of the payment.

**presentValueAmount** (zero or one occurrence; of the type Money) A monetary amount representing the present value of the forecast payment.

### 2.44.3 Used by:

- Complex type: Cashflows

            estimate the discount factor.
        </xsd:documentation>
    </xsd:annotation>
</xsd:attribute>
</xsd:complexType>

```

## 2.45 PaymentDates

### 2.45.1 Description:

A type defining parameters used to generate the payment dates schedule, including the specification of early or delayed payments. Payment dates are determined relative to the calculation period dates or the reset dates.

### 2.45.2 Contents:

Either

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

Or

**resetDatesReference** (exactly one occurrence; of the type ResetDatesReference) A pointer style reference to the associated reset dates component defined elsewhere in the document.

**paymentFrequency** (exactly one occurrence; of the type Interval) The frequency at which regular payment dates occur. If the payment frequency is equal to the frequency defined in the calculation period dates component then one calculation period contributes to each payment amount. If the payment frequency is less frequent than the frequency defined in the calculation period dates component then more than one calculation period will contribute to a payment amount. A payment frequency more frequent than the calculation period frequency or one that is not a multiple of the calculation period frequency is invalid.

**firstPaymentDate** (zero or one occurrence; of the type xsd:date) The first unadjusted payment date. This day may be subject to adjustment in accordance with any business day convention specified in paymentDatesAdjustments. This element must only be included if there is an initial stub. This date will normally correspond to an unadjusted calculation period start or end date. This is true even if early or delayed payment is specified to be applicable since the actual first payment date will be the specified number of days before or after the applicable adjusted calculation period start or end date with the resulting payment date then being adjusted in accordance with any business day convention specified in paymentDatesAdjustments.

**lastRegularPaymentDate** (zero or one occurrence; of the type xsd:date) The last regular unadjusted payment date. This day may be subject to adjustment in accordance with any business day convention specified in paymentDatesAdjustments. This element must only be included if there is a final stub. All calculation periods after this date contribute to the final payment. The final payment is made relative to the final set of calculation periods or the final reset date as the case may be. This date will normally correspond to an unadjusted calculation period start or end date. This is true even if early or delayed payment is specified to be applicable since the actual last regular payment date will be the specified number of days before or after the applicable adjusted calculation period start or end date with the resulting payment date then being adjusted in accordance with any business day convention specified in paymentDatesAdjustments.

**payRelativeTo** (exactly one occurrence; of the type PayRelativeToEnum) Specifies whether the payments occur relative to each adjusted calculation period start date, adjusted calculation period end date or each reset date. The reset date is applicable in the case of certain euro (former French Franc) floating rate indices. Calculation period start date means relative to the start of the first calculation period contributing to a given payment. Similarly, calculation period end date means the end of the last calculation period contributing to a given payment.

**paymentDaysOffset** (zero or one occurrence; of the type Offset) If early payment or delayed payment is required, specifies the number of days offset that the payment occurs relative to what would otherwise be the unadjusted payment date. The offset can be specified in terms of either calendar or business days. Even in the case of a calendar days offset, the resulting payment date, adjusted for the specified calendar days offset, will still be adjusted in accordance with the specified payment dates adjustments. This element should only be included if early or delayed payment is applicable, i.e. if the periodMultiplier element value is not equal to zero. An early payment would be indicated by a negative periodMultiplier element value and a delayed payment (or payment lag) would be indicated by a positive periodMultiplier element value.

**paymentDatesAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention to apply to each payment date if it would otherwise fall on a day that is not a business day in the specified financial business centers.

### 2.45.3 Used by:

          adjustment in accordance with any business day convention
          specified in paymentDatesAdjustments. This element must only
          be included if there is an initial stub. This date will
          normally correspond to an unadjusted calculation period start
          or end date. This is true even if early or delayed payment is
          specified to be applicable since the actual first payment
          date will be the specified number of days before or after the
          applicable adjusted calculation period start or end date with
          the resulting payment date then being adjusted in accordance
          with any business day convention specified in
          paymentDatesAdjustments.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="lastRegularPaymentDate" type="xsd:date" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The last regular unadjusted payment date. This day may be
          subject to adjustment in accordance with any business day
          convention specified in paymentDatesAdjustments. This element
          must only be included if there is a final stub. All
          calculation periods after this date contribute to the final
          payment. The final payment is made relative to the final set
          of calculation periods or the final reset date as the case
          may be. This date will normally correspond to an unadjusted
          calculation period start or end date. This is true even if
          early or delayed payment is specified to be applicable since
          the actual last regular payment date will be the specified
          number of days before or after the applicable adjusted
          calculation period start or end date with the resulting
```

```

        payment date then being adjusted in accordance with any
        business day convention specified in paymentDatesAdjustments.
    </xsd:documentation>
</xsd:annotation>
</xsd:element>
<xsd:element name="payRelativeTo" type="PayRelativeToEnum">
    <xsd:annotation>
        <xsd:documentation xml:lang="en">
            Specifies whether the payments occur relative to each
            adjusted calculation period start date, adjusted calculation
            period end date or each reset date. The reset date is
            applicable in the case of certain euro (former French Franc)
            floating rate indices. Calculation period start date means
            relative to the start of the first calculation period
            contributing to a given payment. Similarly, calculation
            period end date means the end of the last calculation period
            contributing to a given payment.
        </xsd:documentation>
    </xsd:annotation>
</xsd:element>
<xsd:element name="paymentDaysOffset" type="Offset" minOccurs="0">
    <xsd:annotation>
        <xsd:documentation xml:lang="en">
            If early payment or delayed payment is required, specifies
            the number of days offset that the payment occurs relative to
            what would otherwise be the unadjusted payment date. The
            offset can be specified in terms of either calendar or
            business days. Even in the case of a calendar days offset,
            the resulting payment date, adjusted for the specified
            calendar days offset, will still be adjusted in accordance
            with the specified payment dates adjustments. This element
            should only be included if early or delayed payment is
            applicable, i.e. if the periodMultiplier element value is not
            equal to zero. An early payment would be indicated by a
            negative periodMultiplier element value and a delayed payment
            (or payment lag) would be indicated by a positive
            periodMultiplier element value.

## 2.47 PrincipalExchange

### 2.47.1 Description:

A type defining a principal exchange amount and adjusted exchange date. The type forms part of the cashflow representation of a swap stream.

### 2.47.2 Contents:

**unadjustedPrincipalExchangeDate** (zero or one occurrence; of the type xsd:date)

**adjustedPrincipalExchangeDate** (zero or one occurrence; of the type xsd:date) The principal exchange date. This date should already be adjusted for any applicable business day convention.

**principalExchangeAmount** (zero or one occurrence; of the type xsd:decimal) The principal exchange amount. This amount should be positive if the stream payer is paying the exchange amount and signed negative if they are receiving it.

**discountFactor** (zero or one occurrence; of the type xsd:decimal) The value representing the discount factor used to calculate the present value of the principal exchange amount.

**presentValuePrincipalExchangeAmount** (zero or one occurrence; of the type Money) The amount representing the present value of the principal exchange.

### 2.47.3 Used by:

- Complex type: Cashflows

### 2.47.4 Derived Types:

## 2.48 ReplacementValue

### 2.48.1 Description:

This type is a wrapper holding several different replacement value cash settlement methods described in the 2021 ISDA Definitions.

### 2.48.2 Contents:

Either

**firmQuotations** (exactly one occurrence; of the type ReplacementValueFirmQuotationsMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2021 ISDA Definitions, Section 18.2.4.

Or

**calculationAgentDetermination** (exactly one occurrence; of the type ReplacementValueCalculationAgentDeterminationMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2021 ISDA Definitions, Section 18.2.5.

### 2.48.3 Used by:

### 2.48.4 Derived Types:

## 2.51 ReplacementValueMethodBase

### 2.51.1 Description:

This type is a generic base type holding shared data fields several different replacement value cash settlement methods described in the 2021 ISDA Definitions.

### 2.51.2 Contents:

**cashSettlementCurrency** (exactly one occurrence; of the type Currency) The currency, or currencies, in which the cash settlement amount(s) will be calculated and settled. While the order in which the currencies are stated is unimportant, the cash settlement currency or currencies must correspond to one or both of the constituent currencies of the swap transaction.

**cashSettlementReferenceBanks** (zero or one occurrence; of the type CashSettlementReferenceBanks) A container for a set of reference institutions. These reference institutions may be called upon to provide rate quotations as part of the method to determine the applicable cash settlement amount. If institutions are not specified, it is assumed that reference institutions will be agreed between the parties on the exercise date, or in the case of swap transaction to which mandatory early termination is applicable, the cash settlement valuation date.

**protectedParty** (zero or one occurrence; of the type PartySelector) This may be used to specify which party is protected (e.g. under Replacement Value cash settlement methods).

**cashCollateralCurrency** (zero or one occurrence; of the type Currency) This may be used to indicate the currency of cash collateral for cash settlement purposes.

### 2.51.3 Used by:

</xsd:complexType>
```

## 2.52 ResetDates

### 2.52.1 Description:

A type defining the parameters used to generate the reset dates schedule and associated fixing dates. The reset dates are determined relative to the calculation periods schedules dates.

### 2.52.2 Contents:

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

**resetRelativeTo** (zero or one occurrence; of the type ResetRelativeToEnum) Specifies whether the reset dates are determined with respect to each adjusted calculation period start date or adjusted calculation period end date. If the reset frequency is specified as daily this element must not be included.

**initialFixingDate** (zero or one occurrence; of the type RelativeDateOffset)

**fixingDates** (exactly one occurrence; of the type RelativeDateOffset) Specifies the fixing date relative to the reset date in terms of a business days offset and an associated set of financial business centers. Normally these offset calculation rules will be those specified in the ISDA definition for the relevant floating rate index (ISDA's Floating Rate Option). However, non-standard offset calculation rules may apply for a trade if mutually agreed by the principal parties to the transaction. The href attribute on the dateRelativeTo element should reference the id attribute on the resetDates element.

**rateCutOffDaysOffset** (zero or one occurrence; of the type Offset) Specifies the number of business days before the period end date when the rate cut-off date is assumed to apply. The financial business centers associated with determining the rate cut-off date are those specified in the reset dates adjustments. The rate cut-off number of days must be a negative integer (a value of zero would imply no rate cut off applies in which case the rateCutOffDaysOffset element should not be included). The relevant rate for each reset date in the period from, and including, a rate cut-off date to, but excluding, the next applicable period end date (or, in the case of the last calculation period, the termination date) will (solely for purposes of calculating the floating amount payable on the next applicable payment date) be deemed to be the relevant rate in effect on that rate cut-off date. For example, if rate cut-off days for a daily averaging deal is -2 business days, then the refix rate applied on (period end date - 2 days) will also be applied as the reset on (period end date - 1 day), i.e. the actual number of reset dates remains the same but from the rate cut-off date until the period end date, the same refix rate is applied. Note that in the case of several calculation periods contributing to a single payment, the rate cut-off is assumed only to apply to the final calculation period contributing to that payment. The day type associated with the offset must imply a business days offset.

**resetFrequency** (exactly one occurrence; of the type ResetFrequency) The frequency at which reset dates occur. In the case of a weekly reset frequency, also specifies the day of the week that the reset occurs. If the reset frequency is greater than the calculation period frequency then this implies that more than one reset date is established for each calculation period and some form of rate averaging is applicable.

**resetDatesAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention to apply to each reset date if it would otherwise fall on a day that is not a business day in the specified financial business centers.

```

## 2.54 SettlementProvision

### 2.54.1 Description:

A type defining the specification of settlement terms, occuring when the settlement currency is different to the notional currency of the trade.

### 2.54.2 Contents:

**settlementCurrency** (exactly one occurrence; of the type Currency) The currency that stream settles in (to support swaps that settle in a currency different from the notional currency).

**nonDeliverableSettlement** (zero or one occurrence; of the type NonDeliverableSettlement) The specification of the non-deliverable settlement provision.

### 2.54.3 Used by:

- Complex type: InterestRateStream

### 2.54.4 Derived Types:

### 2.54.5 Figure:

### 2.54.6 Schema Fragment:

```
<xsd:complexType name="SettlementProvision">

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.56 SinglePartyOption

### 2.56.1 Description:

A type describing the buyer and seller of an option.

### 2.56.2 Contents:

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

### 2.56.3 Used by:

  </xsd:sequence>
</xsd:complexType>
```

## 2.57 StubCalculationPeriodAmount

### 2.57.1 Description:

A type defining how the initial or final stub calculation period amounts is calculated. For example, the rate to be applied to the initial or final stub calculation period may be the linear interpolation of two different tenors for the floating rate index specified in the calculation period amount component, e.g. A two month stub period may use the linear interpolation of a one month and three month floating rate. The different rate tenors would be specified in this component. Note that a maximum of two rate tenors can be specified. If a stub period uses a single index tenor and this is the same as that specified in the calculation period amount component then the initial stub or final stub component, as the case may be, must not be included.

### 2.57.2 Contents:

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

**initialStub** (zero or one occurrence; of the type Stub) Specifies how the initial stub amount is calculated. A single floating rate tenor different to that used for the regular part of the calculation periods schedule may be specified, or two floating tenors may be specified. If two floating rate tenors are specified then Linear Interpolation (in accordance with the 2000 ISDA Definitions, Section 8.3. Interpolation) is assumed to apply. Alternatively, an actual known stub rate or stub amount may be specified.

**finalStub** (zero or one occurrence; of the type Stub) Specifies how the final stub amount is calculated. A single floating rate tenor different to that used for the regular part of the calculation periods schedule may be specified, or two floating tenors may be specified. If two floating rate tenors are specified then Linear Interpolation (in accordance with the 2000 ISDA Definitions, Section 8.3. Interpolation) is assumed to apply. Alternatively, an actual known stub rate or stub amount may be specified.

### 2.57.3 Used by:

## 2.58 Swap

### 2.58.1 Description:

A type defining swap streams and additional payments between the principal parties involved in the swap.

### 2.58.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**swapStream** (one or more occurrences; of the type InterestRateStream) The swap streams.

**earlyTerminationProvision** (zero or one occurrence; of the type EarlyTerminationProvision) Parameters specifying provisions relating to the optional and mandatory early termination of a swap transaction.

**cancelableProvision** (zero or one occurrence; of the type CancelableProvision) A provision that allows the specification of an embedded option within a swap giving the buyer of the option the right to terminate the swap, in whole or in part, on the early termination date.

**extendibleProvision** (zero or one occurrence; of the type ExtendibleProvision) A provision that allows the specification of an embedded option with a swap giving the buyer of the option the right to extend the swap, in whole or in part, to the extended termination date.

**additionalPayment** (zero or more occurrences; of the type Payment) Additional payments between the principal parties.

**additionalTerms** (zero or one occurrence; of the type SwapAdditionalTerms) Contains any additional terms to the swap contract.

### 2.58.3 Used by:

- Element: swap

## 2.60 Swaption

### 2.60.1 Description:

A type to define an option on a swap.

### 2.60.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**premium** (zero or more occurrences; of the type Payment) The option premium amount payable by buyer to seller on the specified payment date.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseProcedure** (zero or one occurrence; of the type ExerciseProcedure) A set of parameters defining procedures associated with the exercise.

**calculationAgent** (zero or one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination.

Either

**cashSettlement** (exactly one occurrence; of the type CashSettlement) If specified, this means that cash settlement is applicable to the transaction and defines the parameters associated with the cash settlement procedure. If not specified, then physical settlement is applicable.

Or

**physicalSettlement** (exactly one occurrence; of the type SwaptionPhysicalSettlement) If specified, this defines physical settlement terms which apply to the transaction.

**swaptionStraddle** (exactly one occurrence; of the type xsd:boolean) Whether the option is a swaption or a swaption straddle.

**swaptionAdjustedDates** (zero or one occurrence; of the type SwaptionAdjustedDates) The adjusted dates associated with swaption exercise. These dates have been adjusted for any applicable business day convention.

**swap** (exactly one occurrence; of the type Swap) A swap product definition.

***4 Groups***

## 4.1 CashSettlementMethods2006.model

### 4.1.1 Description:

This model group holds cash settlement methods that were defined in the 2006 Definitions and were not carried over to the 2021 Definitions. These methods should not be used in trades based on the 2021 Definitions.

### 4.1.2 Contents:

Either

**cashPriceMethod** (exactly one occurrence; of the type CashPriceMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (a).

Or

**cashPriceAlternateMethod** (exactly one occurrence; of the type CashPriceMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (b).

Or

**parYieldCurveAdjustedMethod** (exactly one occurrence; of the type YieldCurveMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (c).

Or

**zeroCouponYieldAdjustedMethod** (exactly one occurrence; of the type YieldCurveMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (d).

Or

**crossCurrencyMethod** (exactly one occurrence; of the type CrossCurrencyMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (f) (published in Supplement number 58).

### 4.1.3 Used by:

- Complex type: CashSettlement

## 4.2 CashSettlementMethods2006and2021.model

### 4.2.1 Description:

This model group holds cash settlement methods that are defined in the 2021 Definitions that were also defined in the 2006 Definitions.

### 4.2.2 Contents:

Either

**parYieldCurveUnadjustedMethod** (exactly one occurrence; of the type YieldCurveMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. This method is defined in the 2021 ISDA Definitions, section 18.2.7. The method is also defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (e).

Or

**collateralizedCashPriceMethod** (exactly one occurrence; of the type CollateralizedCashPriceMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2021 ISDA Definitions, Section 18.2.6. Note: the 2021 Definition has different fields than appeared in the 2006 Definitions; this sctructure handles both methods.

### 4.2.3 Used by:

- Complex type: CashSettlement

## 4.3 CashSettlementMethods2021.model

### 4.3.1 Description:

This model group holds cash settlement methods that are defined in the 2021 Definitions that were not previously defined in the ISDA Definitions. These methods should not be used for trades based on the 2006 Definitions.

### 4.3.2 Contents:

Either

**midMarketValuation** (exactly one occurrence; of the type MidMarketValuation) ISDA defined cash settlement methods based on mid-market valuation. These methods are defined in the 2021 ISDA Definitions, Section 18.2.1-3, Cash Settlement Methods.

Or

**replacementValue** (exactly one occurrence; of the type ReplacementValue) ISDA defined cash settlement methods based on replacement value. These methods are defined in the 2021 ISDA Definitions, Section 18.2.4-5, Cash Settlement Methods.

### 4.3.3 Used by:

          Specifies the fixing date relative to the reset date in
          terms of a business days offset and an associated set of
          financial business centers. Normally these offset
          calculation rules will be those specified in the ISDA
          definition for the relevant floating rate index (ISDA's
          Floating Rate Option). However, non-standard offset
          calculation rules may apply for a trade if mutually agreed
          by the principal parties to the transaction. The href
          attribute on the dateRelativeTo element should reference
          the id attribute on the resetDates element.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="rateCutOffDaysOffset" type="Offset" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the number of business days before the period end
          date when the rate cut-off date is assumed to apply. The
          financial business centers associated with determining the
          rate cut-off date are those specified in the reset dates
          adjustments. The rate cut-off number of days must be a
          negative integer (a value of zero would imply no rate cut
          off applies in which case the rateCutOffDaysOffset element
          should not be included). The relevant rate for each reset
          date in the period from, and including, a rate cut-off date
          to, but excluding, the next applicable period end date (or,
          in the case of the last calculation period, the termination
          date) will (solely for purposes of calculating the floating
          amount payable on the next applicable payment date) be
          deemed to be the relevant rate in effect on that rate
          cut-off date. For example, if rate cut-off days for a daily
          averaging deal is -2 business days, then the refix rate
          applied on (period end date - 2 days) will also be applied
          as the reset on (period end date - 1 day), i.e. the actual
          number of reset dates remains the same but from the rate
          cut-off date until the period end date, the same refix rate
          is applied. Note that in the case of several calculation
          periods contributing to a single payment, the rate cut-off
          is assumed only to apply to the final calculation period
          contributing to that payment. The day type associated with
          the offset must imply a business days offset.
        </xsd:documentation>
