## 1.14 EquityOptionTransactionSupplement

### 1.14.1 Description:

A type for defining equity option transaction supplements

### 1.14.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type EquityDerivativeShortFormBase)

- A type for defining short form equity option basic features

**exchangeLookAlike** (zero or one occurrence; of the type xsd:boolean) For a share option transaction, a flag used to indicate whether the transaction is to be treated as an 'exchange look-alike'. This designation has significance for how share adjustments (arising from corporate actions) will be determined for the transaction. For an 'exchange look-alike' transaction the relevant share adjustments will follow that for a corresponding designated contract listed on the related exchange (referred to as Options Exchange Adjustment (ISDA defined term), otherwise the share adjustments will be determined by the calculation agent (referred to as Calculation Agent Adjustment (ISDA defined term)).

**exchangeTradedContractNearest** (zero or one occurrence; of the type xsd:boolean) For an index option transaction, a flag used in conjunction with Futures Price Valuation (ISDA defined term) to indicate whether the Nearest Index Contract provision is applicable. The Nearest Index Contract provision is a rule for determining the Exchange-traded Contract (ISDA defined term) without having to explicitly state the actual contract, delivery month and exchange on which it is traded.

**multipleExchangeIndexAnnexFallback** (zero or one occurrence; of the type xsd:boolean) For an index option transaction, a flag to indicate whether a relevant Multiple Exchange Index Annex is applicable to the transaction. This annex defines additional provisions which are applicable where an index is comprised of component securities that are traded on multiple exchanges.

**methodOfAdjustment** (zero or one occurrence; of the type MethodOfAdjustmentEnum)

**localJurisdiction** (zero or one occurrence; of the type Country) Local Jurisdiction is a term used in the AEJ Master Confirmation, which is used to determine local taxes, which shall mean taxes, duties, and similar charges imposed by the taxing authority of the Local Jurisdiction If this element is not present Local Jurisdiction is Not Applicable.

Either

**optionEntitlement** (exactly one occurrence; of the type xsd:decimal) The number of shares per option comprised in the option transaction supplement.

Or

**multiplier** (exactly one occurrence; of the type xsd:integer) Specifies the contract multiplier that can be associated with an index option.
